Manuale Del Recupero Strutturale E Antisismico:

Manuale del recupero strutturale e antisismico Giovanni Cangi, 2025 **Manuale del recupero strutturale e antisismico. Con CD-ROM** Giovanni Cangi, 2005 **L'attività di ricerca nel dottorato (Atti Codat-Artec, atti della giornata di studio università degli studi di Messina, 18 novembre 2009)**, 2009 Centri storici minori Francesca Romana Stabile, Michele Zampilli, Giovanni Cangi, Lelio Oriano Di Zio, Francesca Geremia, Francesco Giovanetti, Paolo Marconi, Elisabetta Pallottino, 2016-01-03T00:00:00+01:00 Il volume nasce dalle ricerche teoriche e progettuali svolte sul tema del recupero edilizio urbano e ambientale sviluppate nell'ambito del gruppo di lavoro del Master internazionale di II livello in Restauro architettonico e recupero della bellezza dei centri storici diretto da Paolo Marconi e coordinato da Elisabetta Pallottino. I diversi contributi si propongono di tracciare un percorso analitico e progettuale sulla questione della riqualificazione dei centri storici minori, tema centrale nell'ambito della valorizzazione architettonica e paesistica del territorio italiano. Riflettere sul recupero della bellezza dei borghi antichi spesso in stato di abbandono vuole contribuire ad alimentare l'interesse e le competenze operative legate alla salvaguardia del tessuto edilizio storico e dei suoi valori formali e costruttivi. Il volume a cura di Francesca Romana Stabile, Michele Zampilli e Chiara Cortesi con un saggio introduttivo di Paolo Marconi Conservation and Restoration of Built Heritage Salvatore D'Agostino, 2021-08-16 The word conservation when used in the context of the preservation of built heritage implies an intrinsically complex concept that evolved over time since it has been influenced by the perception of history throughout time. This volume emphasises why an understanding of the cultural evolution of the conservation approach must be considered a prerequisite for architects and engineers if they are to cooperate in full harmony with historic artistic culture for the preservation of global built heritage. In particular, the volume highlights how during the second half of the last century the preservation process also involved engineering the science of making practical applications of knowledge which for a long time made an uncritical use of techniques and materials and devised interventions on historical heritage that were heavily invasive. The volume also devotes special attention to the problems related to seismic risk to which Italy, Greece and Portugal are particularly prone. Problems that emerge during the crisis and reconstruction phases are dealt with in detail as is scheduled maintenance as this latter approach always constitutes an improvement in the performance of the monument and is the most appropriate tool for the conservation of the built heritage. Finally, the volume collects examples of building restoration with case studies of many outstanding monuments. The work will appeal to professionals and academics in the broader fields of civil engineering, both geotechnical and structural engineering, architecture, art history, the history of architecture, restoration and cultural heritage management. This book will provide a critical reading of the history of conservation. Discuss materials and techniques of ancient architecture. Cover seismic vulnerability and preservation of the historic integrity of the monument. Advocate an approach based on programmed maintenance. Feature numerous case histories including St Mark's Basilica in Venice and the
