The Accident Syndrome:

The Medical Basis for Radiation-Accident Preparedness Robert C. Ricks, Mary Ellen Berger, Frederick M. O'Hara, Jr., 2002-01-04 Major radiation accidents cause widespread and common psychosocial problems independent of cultural, ethnic, political and socioeconomic aspects of the location of the accident. As a doctor, nurse or emergency room staff, you are the first line of defense when these accidents happen. New developments over the past several years enable physicians to enhance survival and ease the discomfort of patients injured by radiation. **The Medical Basis for Radiation Accident Preparedness** The Clinical Care of Victims presents the current state of the art in radiation medicine and focuses on the practical issues of importance to the clinicians and nurses who have responsibility for diagnosing, treating and caring for the radiation accident patient. Topics range from dose assessment to socioeconomic considerations with extensive analyses of treatment options for exposure to different parts of the body. As a special feature, the work supplies case histories of six recent significant radiological accidents and also includes bibliographic references and index. You don't know when you may be involved in treating radiation accident patients. In today's uncertain world, it could happen at any time. Drawing on the expertise of a wide variety of contributors both within and outside of the field of radiation management, **The Medical Basis for Radiation Accident Preparedness** The Clinical Care of Victims provides further insight into the complex care and teamwork needed in the management of the acutely injured patient.

Stress and Somatic Symptoms Kyung Bong Koh, 2018-11-22 This book focuses on the assessment and treatment of patients with somatic symptoms based on biopsychosocial-spiritual model.

Specific assessment skills and treatment techniques are required to approach them effectively. A broad spectrum of knowledge about stress is also needed because stress is closely related to the onset and course of disorders with somatic symptoms. This book consists of four parts. Part 1 Stress explores stress, vulnerability, and resilience, intermediate mechanisms between stress and illnesses such as psychoendocrinology and psychoimmunology, the measurement of stress, and the relationship between stress and accidents. Part 2 Somatization deals with the concept, mechanisms, assessment, and treatment of somatization. In addition, somatic symptom and related disorders in DSM-5 are included. However, the approach to chronic pain is separately added to this part because pain is a major concern for patients with these disorders. Part 3 Specific physical disorders mainly deals with common and distressing functional physical disorders as well as major physical disorders. Therapeutic approach for individuals at risk of coronary heart disease is also included. Part 4 Religion, spirituality, and psychosomatic medicine emphasizes the importance of a biopsychosocial-spiritual perspective in an approach for patients with somatic symptoms, especially depressed patients with physical diseases and patients with terminal illnesses, because of the growing need for spirituality in such patients. This book explores stress and a variety of issues relevant to the assessment and treatment of disorders with somatic symptoms in terms of biopsychosocial-spiritual perspectives. It will be of interest to researchers and healthcare practitioners dealing with stress, health, and mental health.

Accident Prone John

Burnham, 2010-04-15 Technology demands uniformity from human beings who encounter it. People encountering technology however differ from one another. Thinkers in the early twentieth century observing the awful consequences of interactions between humans and machines death by automobiles or dismemberment by factory machinery for example developed the idea of accident proneness the tendency of a particular person to have more accidents than most people. In tracing this concept from its birth to its disappearance at the end of the twentieth century Accident Prone offers a unique history of technology focused not on innovations but on their unintended consequences. Here John C Burnham shows that as the machine era progressed the physical and economic impact of accidents coevolved with the rise of the insurance industry and trends in twentieth century psychology. After World War I psychologists determined that some people are more accident prone than others. This designation signaled a shift in social strategy toward minimizing accidents by diverting particular people away from dangerous environments. By the 1960s and 1970s however the idea of accident proneness gradually declined and engineers developed new technologies to protect all people thereby introducing a hidden but radical egalitarianism. Lying at the intersection of the history of technology the history of medicine and psychology and environmental history Accident Prone is an ambitious intellectual analysis of the birth growth and decline of an idea that will interest anyone who wishes to understand how Western societies have grappled with the human costs of modern life.

Foreign Accent Syndromes Jack Ryalls, Nick Miller, 2014-08-13 What does it feel like to wake up one day speaking with a foreign accent from a country one has never visited? Why does someone wake up doing this? This book seeks to portray the broad and diverse experiences of individuals with a rare neurological speech disorder called Foreign Accent Syndrome (FAS). Through a combination of personal testimony and scientific commentary the book aims to shed unprecedented light on the understanding of FAS by elucidating the complex links between how the brain produces speech how listeners perceive speech and the role that accent plays in our perception of self and others. The first part of the book provides a comprehensive introduction to FAS and covers a number of key subject areas including The definition and phenomenology of FAS A history of research on FAS The causes and psychosocial consequences of FAS A guide to further reading and a glossary of specialized terms The chapters in part two provide a unique insight into the condition through personal testimony and accounts from family members. This collection of 28 testimonies from across the world underlines the importance of listening carefully to patients explain their cases and in their own words. The final section contains a questionnaire for use by clinicians to support case history taking. The authors are two leading global experts on FAS and this is the first volume of its kind to provide such a broad and comprehensive examination of this rare and poorly understood condition. It will be of great interest to practising clinicians in neurology psychiatry psychology and speech and language therapy pathology as well as students in

health disciplines relevant to neurorehabilitation linguists and also to families and caregivers **The Principles and Practice of Medical Jurisprudence** Alfred Swaine Taylor,1873 *Sciences of Communication Disorders* Meenakshi Nehru,2025-01-24 Communication is the foundation of human interaction and understanding disorders in this realm is vital for improving lives Sciences of Communication Disorders offers an in depth look at audiology and speech language pathology exploring the assessment and rehabilitation of hearing and speech impairments This book provides insights into the latest research practical techniques and real life case studies to help professionals address communication challenges effectively It s an essential resource for students therapists and anyone interested in advancing their knowledge of communication disorders and their impact on individuals and communities **Cerebral and Mental Symptoms in Relation to Somatic Disease, Anaesthetics and Toxic Agents, Traumata and Surgical Procedures** James Christian Simpson,1898

Accidents in Their Medico-legal Aspect Douglas Knocker,1912 **Language beyond Words: The Neuroscience of Accent** Ignacio Moreno-Torres,Peter Mariën,Guadalupe Dávila,Marcelo L. Berthier,2017-03-23 Language learning also implies the acquisition of a set of phonetic rules and prosodic contours which define the accent in that language While often considered as merely accessory accent is an essential component of psychological identity as it embodies information on origin culture and social class Speaking with a non standard foreign accent is not inconsequential because it may negatively impact communication and social adjustment Nevertheless the lack of a formal definition of accent may explain that as compared with other aspects of language it has received relatively little attention until recently During the past decade there has been increasing interest in the analysis of accent from a neuroscientific perspective This e book integrates data from different scientific frameworks The reader will find fruitful research on new models of accent processing how learning a new accent proceeds and the role of feedback on accent learning in healthy subjects In addition information on accent changes in pathological conditions including developmental and psychogenic foreign accent syndromes as well as the description of a new variant of foreign accent syndrome is also included It is anticipated that the articles in this e book will enhance the understanding of accent as a linguistic phenomenon the neural networks supporting it and potential interventions to accelerate acquisition or relearning of native accents **The Posttraumatic Syndrome Following Head Injury** Sherwood Arthur Jacobson,1963 *The Practice of Surgery. A Manual ... With Five Hundred and Seven Illustrations* Thomas Bryant,1872 **On concussion of the spine, nervous shock and other obscure injuries to the nervous system in their clinical and medico-legal aspects** John Eric Erichsen,1883 **One Decade After Chernobyl: Summing Up the Consequences of the Accident** ,1996 **Handbook of Practical Medicine: Diseases of the nerves, muscles, and skin** Hermann Eichhorst,1886 **A Manual for the practice of surgery** Thomas Bryant,1879 **A System of Legal Medicine** Allan McLane Hamilton,1895 **On Loss of Weight, Blood Spitting, and Lung Disease** Horace Benge Dobell,1878
