The Alumni Murders:

Masters of True Crime R. Barri Flowers, 2012-07-24 Spanning murder cases from the beginning of the twentieth century to today this is a must read for fans of true crime and will also be compelling to mystery and thriller readers The contributors include Harold Schechter Katherine Ramsland Carol Anne Davis Burl Barer and other leading writers in this genre In February 1975 nine year old Marcia Trimble left her house in Nashville to deliver Girl Scout cookies in the neighborhood She never returned After a massive but fruitless search her body was discovered on Easter Sunday Outrage and horror gripped the community of Nashville but the murder investigation was frustrated at every turn The case went cold for three decades until it was finally solved In January 1997 Herbert Blitzstein was found murdered in the living room of his Las Vegas townhouse A notorious mob insider Fat Herbie had pursued loan sharking and other rackets for decades Now Blitzstein had been dispatched gangland style by three bullets to the back of the head in what appeared to be a classic contract killing But the details of who killed him and why turned out to be much more complicated and the real motives and circumstances remain murky to this day These are just two examples of the riveting stories assembled in this unparalleled collection of some of the top true crime writers in the world Each of the seventeen contributors draws on his or her own strengths backgrounds interests and research skills to describe in a vivid narrative not only the facts of each notorious case but also the terrible emotions and macabre circumstances surrounding the crimes

Causes, Correlates and Consequences of Death Among Older Adults Jere R. Behrman, Robin C. Sickles, Paul Taubman, 2012-12-06 All humans eventually die but life expectancies differ over time and among different demographic groups Teasing out the various causes and correlates of death is a challenge and it is one we take on in this book A look at the data on mortality is both interesting and suggestive of some possible relationships In 1900 life expectancies at birth were 46 3 and 48 3 years for men and women respectively a gender differential of a bit less than 5 percent Life expectancies for whites then were about 0 3 years longer than that of the whole population but life expectancies for blacks were only about 33 years for men and women At age 65 the remaining life expectancies were about 12 and 11 years for whites and blacks respectively Fifty years later life expectancies at birth had grown to 66 and 71 years for males and females respectively The percentage differential between the sexes was now almost up to 10 percent The life expectancies of whites were about one year longer than that for the entire population The big change was for blacks whose life expectancy had grown to over 60 years with black females living about 5 percent longer than their male counterparts At age 65 the remaining expected life had increased about two years with much larger percentage gains for blacks

Ruse,1980-12-01 **Atherogenesis and Aging** Sandra R. Bates,Edwin C. Gangloff,2012-12-06 Age is a nonreversible risk factor for atherosclerosis The atherosclerotic process begins early in life progresses during the middle years and usually culminates in clinical disease towards the later years of the life span Since atherosclerosis is a multifactorial disease and many of the risk factors are time and age related it has been difficult to sort out intrinsic aging from environmental factors that operate over many years Furthermore the role of genetic factors remains unknown This workshop has produced much worthwhile information that is helping elucidate the impact of age on atherogenesis Important strides have been made in understanding the role of changes in the arterial wall and of lipoproteins platelets and monocyte derived macrophages in the disease process In parallel our understanding of the biology of aging has increased sufficiently so that these two areas of interest can now profitably intersect The proceedings of this successful workshop emphasize that there is much to be gained by continued interaction between those scientists interested in the biology of aging at all levels and those interested in the atherosclerotic process Hopefully we may eventually progress in our understanding and reach the stage when atherosclerosis will no longer be an inexorable concomitant of human aging Edwin L Bierman M D Contents Foreword V Contributors IX Participants in the Workshop XV Introduction and Statement of Research Recommendations Sandra R
