

Chapter 5 -- Elasticity and Its Application

On this chapter look for the answers to these questions:

- What is elasticity? What kinds of factors can elasticity help us understand?
- What is the price elasticity of demand? How is it related to the demand curve? How is it related to demand's responsiveness?
- What is the price elasticity of supply? How is it related to the supply curve?
- What are the income and cross-price elasticities of demand?

It interests:

How things respond to some phenomena

How change affects an economy, and especially, what an economy can bear.

How people are facing uncertainty that opportunity cost of your time, the value of knowing if you just go to class

How far it demand curve that are want to be more elastic? If you have your price, how many more students? How much will your demand fall, or might it even increase?

Elascticity:

- Some good elasticity measures that show the various responses changes in another variable.
 - One type of elasticity measures how much demand for other variables and that is cross-price elasticity.
- Definition: The change in a variable's measure of the responsiveness of Q^D to Q^D to a unit of the independent.

Price Elasticity of Demand

- Price elasticity of demand measures how much Q^D responds to a change in P .
- Formula: the price elasticity of demand's demand.

$$\text{Price elasticity of demand} = \frac{\text{Percentage change in } Q^D}{\text{Percentage change in } P}$$

Along a demand curve, P and Q^D move in opposite directions, which means that price elasticity is negative. Use this fact the whole year, and repeat all price elasticity calculations.

Example:

The price elasticity of demand for chocolate is 0.75. If the price of chocolate falls by 10%, the quantity demanded will rise by 7.5%.

Calculating Percentage Changes

Example: If the price of a good falls from \$10 to \$9, the percentage change in price is:

Percentage change = $\frac{\text{New Price} - \text{Old Price}}{\text{Old Price}} \times 100$
 = $\frac{9 - 10}{10} \times 100 = -10\%$
