The National Weather Service:

A Vision for the National Weather Service National Research Council, National Weather Service, Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, National Weather Service Modernization Committee, Panel on the Road Map for the Future, 1999-03-04 In this study the committee explores ways the National Weather Service NWS can take advantage of continuing advances in science and technology to meet the challenges of the future The predictions are focused on the target year 2025 Because specific predictions about the state of science and technology or the NWS more than 25 years in the future will not be entirely accurate the goal of this report is to identify and highlight trends that are most likely to influence change The Panel on the Road Map for the Future National Weather Service developed an optimistic vision for 2025 based on advances in science and technology *Weather Services for the Nation* National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on the Assessment of the National Weather Service's Modernization Program, 2012-11-02 During the 1980s and 1990s the National Weather Service NWS undertook a major program called the Modernization and Associated Restructuring MAR The MAR was officially completed in 2000 No comprehensive assessment of the execution of the MAR plan or comparison of the promised benefits of the MAR to its actual impact had ever been conducted Therefore Congress asked the National Academy of Sciences to conduct an end to end assessment That report The National Weather Service Modernization and Associated Restructuring A Retrospective Assessment concluded that the MAR was a success Now twelve years after the official completion of the MAR the challenges faced by the NWS are no less important than those of the pre MAR era The three key challenges are 1 Keeping Pace with accelerating scientific and technological advancement 2 Meeting Expanding and Evolving User Needs in an increasingly information centric society and 3 Partnering with an Increasingly Capable Enterprise that has grown considerably since the time of the MAR Weather Services for the Nation presents three main recommendations for responding to these challenges These recommendations will help the NWS address these challenges making it more agile and effective This will put it on a path to becoming second to none at integrating advances in science and technology into its operations and at meeting user needs leading in some areas and keeping pace in others It will have the highest quality core capabilities among national weather services It will have a more agile organizational structure and workforce that allow it to directly or indirectly reach more end users save more lives and help more businesses And it will have leveraged these capabilities through the broader enterprise This approach will make possible societal benefits beyond what the NWS budget alone allows **The National Weather Service Modernization and Associated Restructuring** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on the Assessment of the National Weather Service's Modernization Program, 2012-01-25 The Modernization and Associated Restructuring MAR of the National Weather Service NWS was a large and complex re engineering of a federal agency The

process lasted a decade and cost an estimated 4.5 billion. The result was greater integration of science into weather service activities and improved outreach and coordination with users of weather information. The MAR created a new modernized NWS and significantly it created a framework that will allow the NWS to keep up with technological changes in a more evolutionary manner. The MAR was both necessary and generally well executed. However, it required revolutionary, often difficult changes. The procurement of large, complex technical systems presented challenges in and of itself. The MAR also affected the career paths and personal lives of a large portion of the field office workforce. The MAR created a new modernized NWS and significantly it created a framework that will allow the NWS to keep up with technological changes in a more evolutionary manner. The National Weather Service Modernization and Associated Restructuring presents the first comprehensive assessment of the execution of the MAR and its impact on the provision of weather services in the United States. This report provides an assessment that addresses the past modernization as well as lessons learned to support future improvements to NWS capabilities.
