

# Seven Learning Conditions Measured by the Ascend Survey

Research is clear: When students' learning environments help them feel competent, valued, respected, connected to others, and supported in their learning, students are more likely to engage in behaviors that support academic achievement, and this in turn supports greater retention in college and degree attainment.

PERTS [Ascend](#) is a data-driven professional learning program that enables college instructors and administrators to measure how their students are experiencing courses and what they can do to make those experiences more equitable, more engaging, and more supportive of student success.

Necessary Conditions of Learning presents a research approach phenomenography and a theory the variation theory of learning introduced and developed by Ference Marton and taken up by his wide and varied following around the world together with their practical applications in educational contexts Reflecting Marton's whole lifetime's work the unique and significant contribution of this book is to offer an evidence based answer to the questions How do we make novel meanings our own and How do we learn to see things in more powerful ways The presentation makes use of hundreds of empirical studies carried out in Europe and Asia which build on the theory The line of reasoning and the way in which the examples are put together is consistent with the theory it is both presented and applied The main argument is that in order to learn we have to discern and to discern the intended ideas we must be presented with carefully structured variation against a background of invariance We then go through processes of contrast generalization and fusion in order to make sense These insights form a practical framework for those who design teaching and teaching materials Necessary Conditions of Learning is a major original work for which scholars of pedagogical theory have been waiting a long time      **Handbook of Research on Educational Communications and Technology** David Jonassen, Michael J.
