## **The Nature Of The Chemical Bond:**

*The Nature of the Chemical Bond and the Structure of Molecules and Crystals* Linus Pauling, 1960 Thorough discussion of the various types of bonds their relative natures and the structure of molecules and crystals    *The Nature of the Chemical Bond and the Structure of Molecules and Crystals* Linus Pauling, 1963

## **The Nature of the Chemical Bond and the Structure of Molecules and Crystals** Linus Pauling, 1960

Resonance and the chemical bond The partial ionic character of covalent bonds and the relative electronegativity of atoms The directed bond Bond strengths and bond angles The magnetic criterion for bond type The resonance of molecules among several valence bond structures Interatomic distances and their relation to the structure of molecules and crystals Types of resonance in molecules The structure of molecules and complex ions involving bonds with partial double bond character The one electron bond and the three electron bond The hydrogen bond The sizes of ions and the structure of ionic crystals The metallic bond A summarizing discussion of resonance and its significance for chemistry

## **The nature of the chemical bond and the structure of molecules and crystals** Linus Pauling,    **Linus Pauling** Linus Pauling, Barclay Kamb, 2001

Linus Pauling wrote a stellar series of over 800 scientific papers spanning an amazing range of fields some of which he himself initiated This book is a selection of the most important of his writings in the fields of quantum mechanics chemical bonding covalent ionic metallic and hydrogen bonding molecular rotation and entropy protein structure hemoglobin molecular disease molecular evolution the antibody mechanism the molecular basis of anesthesia orthomolecular medicine radiation chemistry biology and nuclear structure Through these papers the reader gets a fresh unfiltered view of the genius of Pauling's many contributions to chemistry chemical physics molecular biology and molecular medicine

*The Chemical Bond I* D. Michael P. Mingos, 2016-09-09 The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader

whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience. Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed. A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere. The coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented. Discussion of possible future research directions in the area is welcomed. Review articles for the individual volumes are invited by the volume editors.

Modern life is made up of a mind boggling array of materials. A simple drinking cup for example might be made of Styrofoam paper or glass depending on the drinker's needs at the moment. Home storage cabinets can be made of metal, wood or plastic. Space shuttles are assembled from silicon steel and hundreds of other materials. All of these items owe their properties to the chemical bonds between the atoms that make up the substance. Chemical Bonds examines the nature of the chemical bonds, answering fundamental questions about how they form, how they are broken and how they help define life as we know it.
