## **The New Cosmos Heidelberg Science Library:**

The New Cosmos Albrecht Unsöld, Bodo Baschek, 2013-03-09 Astronomy astrophysics and space research have developed extensively and rapidly in the last few decades. The new opportunities for observation afforded by space travel, the development of high sensitivity light detectors and the use of powerful computers have revealed new aspects of the fascinating world of galaxies and quasars, stars and planets. The fourth completely revised edition of *The New Cosmos* bears witness to this explosive development. It provides a comprehensive but concise introduction to all of astronomy and astrophysics. It stresses observations and theoretical principles equally, requiring of the reader only basic mathematical and scientific background knowledge. Like its predecessors, this edition of *The New Cosmos* will be welcomed by students and researchers in the fields of astronomy, physics and earth sciences as well as by serious amateur astronomers.

*A Simple Non-Euclidean Geometry and Its Physical Basis* I.M. Yaglom, 2012-12-06 There are many technical and popular accounts both in Russian and in other languages of the non-Euclidean geometry of Lobachevsky and Bolyai, a few of which are listed in the Bibliography. This geometry, also called hyperbolic geometry, is part of the required subject matter of many mathematics departments in universities and teachers' colleges. A reflection of the view that familiarity with the elements of hyperbolic geometry is a useful part of the background of future high school teachers, much attention is paid to hyperbolic geometry by school mathematics clubs. Some mathematicians and educators concerned with reform of the high school curriculum believe that the required part of the curriculum should include elements of hyperbolic geometry and that the optional part of the curriculum should include a topic related to hyperbolic geometry. The broad interest in hyperbolic geometry is not surprising. This interest has little to do with mathematical and scientific applications of hyperbolic geometry, since the applications, for instance in the theory of automorphic functions, are rather specialized and are likely to be encountered by very few of the many students who conscientiously study and then present to examiners the definition of parallels in hyperbolic geometry and the special features of configurations of lines in the hyperbolic plane. The principal reason for the interest in hyperbolic geometry is the important fact of non-uniqueness of geometry: the existence of many geometric systems.

The New Cosmos Albrecht Unsöld, Bodo Baschek, 2001-09-04 This new edition of the classic textbook *The New Cosmos* presents a comprehensive introductory survey of the whole field of astronomy and astrophysics. Among the topics covered are Classical astronomy and the Solar System; Instruments and observational methods; The Sun and the stars; The Milky Way and other galaxies; Cosmology; The origin of the Solar System; The evolution of the Earth and of life. The observational methods and results of astronomical research as well as their theoretical foundations and interrelations are presented in an understandable format. The rapid progress of observational techniques and of theoretical understanding in the past decade are introduced and summarized in this timely and readable volume. This revised and extended new printing demonstrates the rapid advances in astronomical research and observation in the three years since the appearance of the 5th

edition The most important new results can be found within providing in particular up to date information on our solar system neutrino radiation from the Sun the farthest galaxies and quasars and the development of the Universe *Catalog of Copyright Entries.
