Species Problem The:

The Species Problem David N. Stamos, 2003-03-17 In this provocative work David N Stamos tackles the problem of determining exactly what a biological species is in short whether species are real and the nature of their reality Although many have written on this topic The Species Problem is the only comprehensive single authored book on this central concern of biology Stamos critically considers the evolution of the three major contemporary views of species species nominalism species as classes and species as individuals Finally he develops his own solution to the species problem a solution aimed at providing a universal species concept worthy of the Modern Synthesis This book will be of interest to philosophers of biology and of science in general to historians of biology and to biologists concerned with one of the most significant and practical conceptual issues in their field

The Species Problem Igor Ya. Pavlinov, 2023-02-24 The general notion of species is one of the most fundamental in biology But an idea of species is also one of the most persistent unresolved obsessions of biologists philosophers and theoreticians This new book investigates the multifaceted problem species as a conceptual envelope of that notion Contemporary conceptualists and evolutionary epistemology allow for a fresh look by analyzing the framework of history viewed as changes ordered by changing philosophical scientific contexts In this analysis the species problem is characterized in a pluralistic non trivial manner in contrast to a more monistic accepted view

Key Features
Provides new insights into the persistent species problem
Focuses on conceptual history and identifies pivotal landmarks in the history of the concept of species
Argues for a scientific consistency of species pluralism
Discusses the evolving species hood in the context of new essentialism

The Species Problem Igor Pavlinov, 2013-02-06 The book includes collection of theoretical papers dealing with the species problem which is among most fundamental issues in biology The principal topics are consideration of the species problem from the standpoint of modern non classical science paradigm with emphasis on its conceptual status presuming its analysis within certain conceptual framework evolutionary emergence of the species as discrete unit of certain level of generality epistemological consideration of the species as a particular explanatory hypotheses with respective revised concepts of biodiversity and conservation considerations of evolutionary and phylogenomic species concepts as candidates for the universal one re appraisal of the biological species concept based on the friend foe recognition system species delimitation approach using multi locus coalescent based method a re consideration of the Darwin s species concept

Species Problems and Beyond John S. Wilkins, Frank E. Zachos, Igor Ya. Pavlinov, 2022-06-14 Species Problems and Beyond offers a collection of up to date essays discussing from an interdisciplinary perspective the many ramifications of the Species Problem The authors represent experts in the philosophy of biology in species level

evolutionary investigations and in biodiversity studies and conservation. Some of the topics addressed concern the context sensitivity of the term species, species as individuals, processes, natural kinds, or as operative concepts, species delimitation in the age of Big genomic Data and taxonomic inflation and its consequences for conservation strategies. The carefully edited volume will be an invaluable resource for philosophers of biology and evolutionary biologists alike. Species or the Species Problem is a topic in science, in the philosophy of science, and in general philosophy. In fact, it encompasses many aspects of the same problem, and these are dealt with in this volume. Species are often thought of as fundamental units of biological matter to be used in ecology, conservation, classification, and biodiversity. The chapters in this book present opposing views on the current philosophical and conceptual issues of the Species Problem in biology. Divided into four sections: Concepts and Theories, Practice and Methods, Ranks and Trees, and Names and Metaphysics and Epistemologies, the book is authored by biologists, philosophers, and historians, many leaders in their fields. Topics include ontology of species, definitions of both species category and units, species rank, speciation issues, nomenclature, ecology, and species conservation. *Species Problems and Beyond* aims to clarify the contemporary issues of the Species Problem. It is ideal for use in upper level seminars and courses in Evolutionary Biology, Philosophy of Science, Philosophy of Biology, Systematics and Taxonomy, and Phylogenetics, Cladistics, and for any scholar in these fields. *Renegotiating Disciplinary Fields in the Life Sciences*, Alessandro Minelli, 2021-02-24. Recent and ongoing debates in biology and the philosophy of biology reveal a widespread dissatisfaction with traditional explanatory frameworks. There are also problems with the current definitions or circumscriptions of key concepts such as gene, species, and homology, and even of whole disciplinary fields within the life sciences, e.g. developmental biology. These contrasting views are arguably a symptom of the need to revisit traditional unchallenged partitions between the specialist disciplines within the life sciences. In the diversity of topics addressed and approaches to move beyond the current disciplinary organization, the five essays in this volume will hopefully stimulate further exploration towards an improved articulation of life sciences. *Species Problem: Issues and Challenges*, Shirley Striker, 2015-03-25. An elucidative account regarding the topic of species problem and certain issues as well as challenges related to it have been provided in this book. It is a compilation of theoretical research works regarding the species problem, which is among the most elementary issues in biology. The primary topics covered in this book are evolutionary emergence of the species as an individual unit of a specific level of generality, consideration of the species problem from the point of view of modern non-conventional science paradigm with stress on its conceptual status, presuming its characterization in the boundaries of specific conceptual framework, a review of the concept of biological species on the basis of the friend-foe identification system, considerations of the concepts of phylogenomics and evolution of species as candidates for the universal one-species delimitation approach employing multi-locus coalescent based technique, epistemological view of the species as a specific

explanatory hypotheses review of species concept proposed by Darwin *Species Problems and Beyond* John S. Wilkins, Frank E.
