## **Spectrum Of A Module Category:**

*The Spectrum of a Module Category* Henning Krause,2001 These notes present an introduction into the spectrum of the category of modules over a ring We discuss the general theory of pure injective modules and concentrate on the isomorphism classes of indecomposable pure injective modules which form the underlying set of this spectrum The interplay between the spectrum and the category of finitely presented modules provides new insight into the geometrical and homological properties of the category of finitely presented modules Various applications from representation theory of finite dimensional algebras are included

[Spectra and the Steenrod Algebra](#) H.R. Margolis,1983-02-12 I have intended this book to be more than just the sum of its chapters and the introduction is in part an attempt to spell out what the more is Algebraic topology is the study of topological problems by algebraic means More precisely this has come to be framed as the study of topological categories by means of functors to algebraic categories

Beyond the basic definitions and structure the focus is often on particular problems for example Adams use of K theory to solve the vector fields on spheres problem On the other hand there are contributions of a more global nature yielding insight into the overall structure of some topological category for example Quillen s work on rational homotopy type This book is intended primarily as a contribution of this latter sort So while there will be a variety of particular examples and computations and although the structure being developed has significant application to many specific problems some of which are considered here the major thrust of the text is toward understanding the global structure and linkage of the topological and algebraic categories considered the stable homotopy category and the category of modules over the Steenrod algebra
