Spectral Methods in MATLAB Lloyd N. Trefethen,2000-07-01 Mathematics of Computing Numerical Analysis A *Unified Approach to Boundary Value Problems* Athanassios S. Fokas,2008-11-06 A novel approach to analysing initial boundary value problems for integrable partial differential equations PDEs in two dimensions based on ideas of the inverse scattering transform that the author introduced in 1997 This method is unique in also yielding novel integral representations for linear PDEs Several new developments are addressed in the book including a new transform method for linear evolution equations on the half line and on the finite interval analytical inversion of certain integrals such as the attenuated Radon transform and the Dirichlet to Neumann map for a moving boundary integral representations for linear boundary value problems analytical and numerical methods for elliptic PDEs in a convex polygon and integrable nonlinear PDEs An epilogue provides a list of problems on which the author s new approach has been used offers open problems and gives a glimpse into how the method might be applied to problems in three dimensions *Introduction to High Performance Scientific Computing* David L. Chopp,2019-03-01 Based on a course developed by the author Introduction to High Performance Scientific Computing introduces methods for adding parallelism to numerical methods for solving differential equations It contains exercises and programming projects that facilitate learning as well as examples and discussions based on the C programming language with additional comments for those already familiar with C The text provides an overview of concepts and algorithmic techniques for modern scientific computing and is divided into six self contained parts that can be assembled in any order to create an introductory course using available computer hardware Part I introduces the C programming language for those not already familiar with programming in a compiled language Part II describes parallelism on shared memory architectures using OpenMP Part III details parallelism on computer clusters using MPI for coordinating a computation Part IV demonstrates the use of graphical programming units GPUs to solve problems using the CUDA language for NVIDIA graphics cards Part V addresses programming on GPUs for non NVIDIA graphics cards using the OpenCL framework Finally Part VI contains a brief discussion of numerical methods and applications giving the reader an opportunity to test the methods on typical computing problems [Numerically Solving Polynomial Systems with Bertini](#) Daniel J. Bates,Jonathan D. Hauenstein,Andrew J. Sommese,Charles W. Wampler,2013-11-08 This book is a guide to concepts and practice in numerical algebraic geometry the solution of systems of polynomial equations by numerical methods Through numerous examples the authors show how to apply the well received and widely used open source Bertini software package to compute solutions including a detailed manual on syntax and usage options The authors also maintain a complementary web page where readers can find supplementary materials and Bertini input files Numerically Solving Polynomial Systems with Bertini approaches numerical algebraic geometry from a user s point of view with numerous examples of how Bertini is applicable to polynomial systems It treats the fundamental task of solving a given polynomial system and describes the latest

advances in the field including algorithms for intersecting and projecting algebraic sets methods for treating singular sets the nascent field of real numerical algebraic geometry and applications to large polynomial systems arising from differential equations Those who wish to solve polynomial systems can start gently by finding isolated solutions to small systems advance rapidly to using algorithms for finding positive dimensional solution sets curves surfaces etc and learn how to use parallel computers on large problems These techniques are of interest to engineers and scientists in fields where polynomial equations arise including robotics control theory economics physics numerical PDEs and computational chemistry

Accounting for Constraints in Delay Systems Giorgio Valmorbida, Wim Michiels, Pierdomenico Pepe, 2022-04-02 Time delays are fundamental to understand phenomena in control applications as networked systems traffic management control of vibrations and supply chains The need for a performance and reliability on these systems has to overcome challenges related to the constraints in the controlled systems These constraints can be physical such as input magnitude saturation on actuators or technological such as the limited bandwidth in a networked system or the fixed structure in a control architecture where only a few parameters can be set This volume provides a wide ranging collection of methods for the analysis and design of control laws for delay systems with constraints These methods cover fundamental analytical aspects as for instance the stability analysis of Positive Delay systems or the achievable performance of PID controls for delay systems

The book gives valuable material for researchers and graduate students in Automatic Control [Parallel Processing for Scientific Computing](#) Michael A. Heroux, Padma Raghavan, Horst D. Simon, 2006-01-01 Parallel processing has been an enabling technology in scientific computing for more than 20 years This book is the first in depth discussion of parallel computing in 10 years it reflects the mix of topics that mathematicians computer scientists and computational scientists focus on to make parallel processing effective for scientific problems Presently the impact of parallel processing on scientific computing varies greatly across disciplines but it plays a vital role in most problem domains and is absolutely essential in many of them Parallel Processing for Scientific Computing is divided into four parts The first concerns performance modeling analysis and optimization the second focuses on parallel algorithms and software for an array of problems common to many modeling and simulation applications the third emphasizes tools and environments that can ease and enhance the process of application development and the fourth provides a sampling of applications that require parallel computing for scaling to solve larger and realistic models that can advance science and engineering [PETSc for Partial Differential Equations: Numerical Solutions in C and Python](#) Ed Bueler, 2020-10-22 The Portable Extensible Toolkit for Scientific Computation PETSc is an open source library of advanced data structures and methods for solving linear and nonlinear equations and for managing discretizations This book uses these modern numerical tools to demonstrate how to solve nonlinear partial differential equations PDEs in parallel It starts from key mathematical concepts such as Krylov space methods

preconditioning multigrid and Newton s method In PETSc these components are composed at run time into fast solvers

Discretizations are introduced from the beginning with an emphasis on finite difference and finite element methodologies. The example C programs of the first 12 chapters listed on the inside front cover solve mostly elliptic and parabolic PDE problems. Discretization leads to large sparse and generally nonlinear systems of algebraic equations. For such problems mathematical solver concepts are explained and illustrated through the examples with sufficient context to speed further development. PETSc for Partial Differential Equations addresses both discretizations and fast solvers for PDEs emphasizing practice more than theory. Well structured examples lead to run time choices that result in high solver performance and parallel scalability. The last two chapters build on the reader's understanding of fast solver concepts when applying the Firedrake Python finite element solver library. This textbook, the first to cover PETSc programming for nonlinear PDEs, provides an on-ramp for graduate students and researchers to a major area of high performance computing for science and engineering. It is suitable as a supplement for courses in scientific computing or numerical methods for differential equations.
