**Speech Processing in the Auditory System** Steven Greenberg,William A. Ainsworth,Richard R. Fay,2006-05-09

Although speech is the primary behavioral medium by which humans communicate its auditory basis is poorly understood having profound implications on efforts to ameliorate the behavioral consequences of hearing impairment and on the development of robust algorithms for computer speech recognition In this volume the authors provide an up to date synthesis of recent research in the area of speech processing in the auditory system bringing together a diverse range of scientists to present the subject from an interdisciplinary perspective Of particular concern is the ability to understand speech in uncertain potentially adverse acoustic environments currently the bane of both hearing aid and speech recognition technology There is increasing evidence that the perceptual stability characteristic of speech understanding is due at least in part to elegant transformations of the acoustic signal performed by auditory mechanisms As a comprehensive review of speech s auditory basis this book will interest physiologists anatomists psychologists phoneticians computer scientists biomedical and electrical engineers and clinicians

**Listening to Speech** Steven Greenberg,William Ainsworth,2012-12-06 The human species is largely defined by its use of spoken language so integral is speech communication to behavior and social interaction Despite its importance in everyday life comparatively little is known about the auditory mechanisms that underlie the ability to understand language The current volume examines the perception and processing of speech from the perspective of the hearing system The chapters in this book describe a comprehensive set of approaches to the scientific study of speech and hearing ranging from anatomy and physiology to psychophysics and perception and computational modeling The auditory basis of speech is examined within a biological and an evolutionary context and its relevance to applied domains such as communication disorders and speech technology discussed in detail This volume will be of interest to scientists engineers and clinicians whose professional work pertains to any aspect of spoken language or hearing science

The Perception of Speech Brian Moore,Lorraine Tyler,William Marslen-Wilson,2009-11-12 Humans are unique in being able to convey such complex information using speech and in the range of ideas thoughts and emotions that can be expressed This crossdisciplinary book explores how the motor gestures of a speaker are transformed to sounds and how those are mapped onto meaning in the comprehension of spoken language

**The Aging Auditory System** Sandra Gordon-Salant,Robert D. Frisina,Richard R. Fay,Arthur Popper,2010-05-03 This volume brings together noted scientists who study presbycusis from the perspective of complementary disciplines for a review of the current state of knowledge on the aging auditory system Age related hearing loss ARHL is one of the top three most common chronic health conditions affecting individuals aged 65 years and older The high prevalence of age related hearing loss compels audiologists

otolaryngologists and auditory neuroscientists alike to understand the neural genetic and molecular mechanisms underlying this disorder A comprehensive understanding of these factors is needed so that effective prevention intervention and rehabilitative strategies can be developed to ameliorate the myriad of behavioral manifestations     **Auditory Perception of Speech** Derek A. Benesty,M. M. Sondhi,Yiteng Huang,2007-11-22 From common consumer products such as cell phones and MP3 players to more sophisticated projects such as human machine interfaces and responsive robots speech technologies are now everywhere Many think that it is just a matter of time before more applications of the science of speech become inescapable in our daily life This handbook is meant to play a fundamental role for sustainable progress in speech research and development Springer Handbook of Speech Processing targets three categories of readers graduate students professors and active researchers in academia and research labs and engineers in industry who need to understand or implement some specific algorithms for their speech related products The handbook could also be used as a sourcebook for one or more graduate courses on signal processing for speech and different aspects of speech processing and applications A quickly accessible source of application oriented authoritative and comprehensive information about these technologies it combines the established knowledge derived from research in such fast evolving disciplines as signal processing and communications acoustics computer science and linguistics     **Mechanisms of Speech Recognition** W. A. Ainsworth,2014-05-18

Mechanisms of Speech Recognition explores the mechanisms underlying speech recognition Topics covered include the auditory system speech production auditory psychophysics speech synthesis and analysis vowel and consonant recognition and perception of prosodic features and of distorted speech Automatic speech recognition and models of speech recognition are also given consideration This volume consists of 11 chapters and begins with an overview of speech recognition communication and production More specifically it examines the way in which the organs of the vocal apparatus are employed to transform a message consisting of a string of linguistic units such as words or phonemes into a wave of continuous sounds which are recognized as speech The auditory system and its parts are then described from the ears to the organ of Corti and nerve cells The chapters that follow focus on the behavior of the hearing system the various techniques of analyzing speech sounds and speech synthesizers such as vocoders The mechanisms underlying the recognition of vowels and consonants are also described along with the physical parameters of the speech wave which signal the prosody of an utterance the effects of distortions in the speech wave on speech perception and tools used in automatic speech recognition The book concludes with an evaluation of models of speech recognition This book will be of interest to phoneticians linguists physiologists psychologists and physicists     **New perspectives on the role of sensory feedback in speech production** John Houde,Xing Tian,Jeffery A.
