Stochastic Processes In The Neurosciences:

Stochastic Processes in the Neurosciences Henry C. Tuckwell,1989-01-01 This monograph is centered on quantitative analysis of nerve cell behavior The work is foundational with many higher order problems still remaining especially in connection with neural networks Thoroughly addressed topics include stochastic problems in neurobiology and the treatment of the theory of related Markov processes **Stochastic Methods in Neuroscience** Carlo Laing,Gabriel J Lord,2009-09-24 Great interest is now being shown in computational and mathematical neuroscience fuelled in part by the rise in computing power the ability to record large amounts of neurophysiological data and advances in stochastic analysis These techniques are leading to biophysically more realistic models It has also become clear that both neuroscientists and mathematicians profit from collaborations in this exciting research area Graduates and researchers in computational neuroscience and stochastic systems and neuroscientists seeking to learn more about recent advances in the modelling and analysis of noisy neural systems will benefit from this comprehensive overview The series of self contained chapters each written by experts in their field covers key topics such as Markov chain models for ion channel release stochastically forced single neurons and populations of neurons statistical methods for parameter estimation and the numerical approximation of these stochastic models Each chapter gives an overview of a particular topic including its history important results in the area and future challenges and the text comes complete with a jargon busting index of acronyms to allow readers to familiarize themselves with the language used **Stochastic Neuron Models** Priscilla E. Greenwood,Lawrence M. Ward,2016-02-02 This book describes a large number of open problems in the theory of stochastic neural systems with the aim of enticing probabilists to work on them This includes problems arising from stochastic models of individual neurons as well as those arising from stochastic models of the activities of small and large networks of interconnected neurons The necessary neuroscience background to these problems is outlined within the text so readers can grasp the context in which they arise This book will be useful for graduate students and instructors providing material and references for applying probability to stochastic neuron modeling Methods and results are presented but the emphasis is on questions where additional stochastic analysis may contribute neuroscience insight An extensive bibliography is included Dr Priscilla E Greenwood is a Professor Emerita in the Department of Mathematics at the University of British Columbia Dr Lawrence M Ward is a Professor in the Department of Psychology and the Brain Research Centre at the University of British Columbia

Stochastic Biomathematical Models Mostafa Bachar,Jerry J. Batzel,Susanne Ditlevsen,2012-10-19 Stochastic biomathematical models are becoming increasingly important as new light is shed on the role of noise in living systems In certain biological systems stochastic effects may even enhance a signal thus providing a biological motivation for the noise observed in living systems Recent advances in stochastic analysis and increasing computing power facilitate the analysis of more biophysically realistic models and this book provides researchers in computational neuroscience and stochastic systems

with an overview of recent developments Key concepts are developed in chapters written by experts in their respective fields Topics include one dimensional homogeneous diffusions and their boundary behavior large deviation theory and its application in stochastic neurobiological models a review of mathematical methods for stochastic neuronal integrate and fire models stochastic partial differential equation models in neurobiology and stochastic modeling of spreading cortical depression

Time Series Modeling of Neuroscience Data Tohru Ozaki,2012-01-26 Recent advances in brain science measurement technology have given researchers access to very large scale time series data such as EEG MEG data 20 to 100 dimensional and fMRI 140 000 dimensional data To analyze such massive data efficient computational and statistical methods are required Time Series Modeling of Neuroscience Data shows how to

Spectral Information Dynamics in Network Neuroscience and Physiology Laura Sparacino,2026-01-01 This book introduces a unified framework that integrates various data driven information dynamics approaches to quantify node specific pairwise and high order interactions within complex systems in the contexts of network neuroscience and network physiology Using measures of information rate a hierarchical organization of interactions is established to describe the dynamics of individual nodes connections between pairs and redundant or synergistic relationships among groups of nodes Initially defined in the time domain these measures are extended to the spectral domain enabling frequency specific analysis under the Gaussian assumption and linear parametric models The framework is validated on simulated network systems and applied to real world multivariate time series in neuroscience and physiology The spectral high order information measures successfully reveal respiratory driven redundancy in cardiovascular cardiorespiratory and cerebrovascular systems and uncover a predominance of redundancy in high order brain interactions alongside the emergence of synergistic circuits not captured by pairwise analysis These results emphasize the importance of high order frequency resolved information measures in characterizing complex network dynamics and provide new insights into the coordinated functioning of physiological and neural systems

Fundamentals of Computational Neuroscience Thomas P. Trappenberg,2023 The new edition of Fundamentals of Computational Neuroscience build on the success and strengths of the previous editions Completely redesigned and revised it introduces the theoretical foundations of neuroscience with a focus on the nature of information processing in the brain

Fundamentals of Computational Neuroscience Thomas Trappenberg,2010 The new edition of Fundamentals of Computational Neuroscience build on the success and strengths of the first edition It introduces the theoretical foundations of neuroscience with a focus on the nature of information processing in the brain The book covers the introduction and motivation of simplified models of neurons that are suitable for exploring information processing in large brain like networks Additionally it introduces several fundamental networkarchitectures and discusses their relevance for information processing in the brain giving some examples of models of higher order cognitive functions to demonstrate the advanced insight that can be gained with such studies

Advances in

Computational Neuroscience Thomas Nowotny,Sacha Jennifer van Albada,Tatyana Sharpee,Jean-Marc Fellous,Renaud Blaise Jolivet,Julie S. Haas,Christoph Metzner,2022-02-23 *Computational Neuroscience* J.M. Bower,2000-07-08 This volume includes papers originally presented at the 8th annual Computational Neuroscience meeting CNS 99 held in July of 1999 in Pittsburgh Pennsylvania. The CNS meetings bring together computational neuroscientists representing many different fields and backgrounds as well as experimental preparations and theoretical approaches. The papers published here range across vast levels of scale from cellular mechanisms to cognitive brain studies. The subjects of the research include many different preparations from invertebrates to humans. In all cases the work described in this volume is focused on understanding how nervous systems compute. The research described includes subjects like neural coding and neuronal dendrites and reflects a trend towards forging links between cognitive research and neurobiology. Accordingly this volume reflects the breadth and depth of current research in computational neuroscience taking place throughout the world.

Probabilistic Spiking Neuronal Nets Antonio Galves,Eva Löcherbach,Christophe Pouzat,2024-10-16 This book provides a self contained introduction to a new class of stochastic models for systems of spiking neurons. These systems have a large number of interacting components each one evolving as a stochastic process with a memory of variable length. Several mathematical tools are put to use such as Markov chains stochastic chains having memory of variable length point processes having stochastic intensity Hawkes processes random graphs mean field limits perfect sampling algorithms the Context algorithm and statistical model selection. The book's focus on mathematically tractable objects distinguishes it from other texts on theoretical neuroscience. The biological complexity of neurons is not ignored but reduced to some of its main features such as the intrinsic randomness of neuronal dynamics. This reduction in complexity aims at explaining and reproducing statistical regularities and collective phenomena that are observed in experimental data an approach that leads

to mathematically rigorous results With an emphasis on a constructive and algorithmic point of view this book is directed towards mathematicians interested in learning about stochastic network models and their neurobiological underpinning and neuroscientists interested in learning how to build and prove results with mathematical models that relate to actual experimental settings

Fundamentals of the Theory of Structured Dependence between Stochastic Processes

Tomasz R. Bielecki, Jacek Jakubowski, Mariusz Niewęgłowski, 2020-08-27 Comprehensive presentation of the technical aspects and applications of the theory of structured dependence between random processes

Chaotic Transitions in Deterministic and Stochastic Dynamical Systems Emil Simiu, 2014-09-08 The classical Melnikov method provides information on the behavior of deterministic planar systems that may exhibit transitions i.e. escapes from and captures into preferred regions of phase space. This book develops a unified treatment of deterministic and stochastic systems that extends the applicability of the Melnikov method to physically realizable stochastic planar systems with additive state dependent white colored or dichotomous noise. The extended Melnikov method yields the novel result that motions with transitions are chaotic regardless of whether the excitation is deterministic or stochastic. It explains the role in the occurrence of transitions of the characteristics of the system and its deterministic or stochastic excitation and is a powerful modeling and identification tool.

The book is designed primarily for readers interested in applications. The level of preparation required corresponds to the equivalent of a first year graduate course in applied mathematics. No previous exposure to dynamical systems theory or the theory of stochastic processes is required. The theoretical prerequisites and developments are presented in the first part of the book. The second part of the book is devoted to applications ranging from physics to mechanical engineering, naval architecture, oceanography, nonlinear control, stochastic resonance and neurophysiology.

Statistical Mechanics of Neural Networks Luis Garrido, 1990-12-12 Combined for researchers and graduate students the articles from the Sitges Summer School together form an excellent survey of the applications of neural network theory to statistical mechanics and computer science biophysics. Various mathematical models are presented together with their interpretation especially those to do with collective behaviour, learning and storage capacity and dynamical stability.
