Adjusting to a New Technology Elhanan Helpman,Antonio Rangel,1998 In this paper we study how aggregate output responds to the arrival of a new General

Purpose Technology GPT by looking at adjustment mechanisms that operate through labor markets We show that under a wide set of circumstances the arrival of a new GPT that raises long run output can trigger a recession in the short run Furthermore we characterize features of the GPT that produce a cyclical adjustment path An initial recession occurs whenever a higher education level is required to operate the new GPT But a recession can also occur when the new GPT has lower educational requirements A cyclical adjustment path is more likely when inexperienced workers are less productive with the new technology and the faster productivity rises with experience in the new sector
