Improvement Of Desert Ranges In Soviet Central Asia:

Improvement of Desert Ranges in Soviet Central Asia Nina T. Nechaeva, 2024-04-12 *Improvement of Desert Ranges in Soviet Central Asia* 1985 examines the progress made in the Soviet Union's attempts to increase desert vegetation without using irrigation or fertilizers. Prominent Soviet scientists show that by making use of ecological resources alone, particularly moisture reserves and mineral nutrients available in the root zone of the soil, desert ranges worldwide can be made into more productive grazing land.

Sustainable Land Management in Greater Central Asia Victor Squires, Lu Qi, 2017-09-22 Greater Central Asia encompasses a vast area that includes deserts, natural grasslands, steppes, shrublands, and alpine regions. Many of these land types are degraded, and productivity is falling at a time when human populations and livestock inventories are on the rise. Ecosystem stability and biodiversity are under threat, and there is an urgent need to develop more sustainable land management regimes. This book uses an integrated regional approach to provide a comprehensive exploration of sustainable land development in Central Asia. An interdisciplinary team of experts analyses the economic, ecological, sociological, technological, and political factors surrounding sustainable land and water management in the region, sharing potential problems and solutions. As international concern about desertification grows, the book concludes by asking how the region is likely to develop in the future. This book will be of value to scholars, students, policy makers, and NGOs with an interest in sustainable development in Central Asia.

Rangelands of the Arid and Semi-arid Zones in Uzbekistan Gustave Gintzburger, 2003 This abundantly illustrated book presents a panorama of the biodiversity, climatology, and flora of the arid zones of Uzbekistan and describes around 150 dominant range species with their ecology, utilization, and range rehabilitation techniques. It should contribute to a better understanding of these little-known arid zones of Central Asia and to the conservation and rational use of their fragile natural resources.

Prospects for Pastoralism in Kazakhstan and Turkmenistan Dr Carol Kerven, 2005-08-18 This collection traces how pastoralists have coped with the challenges of change in their precarious position in a part of the world with a long tradition of livestock keeping.

Grazing in Future Multi-scapes: From Thoughtscapes to Landscapes, Creating Health from the Ground Up Pablo Gregorini, Iain James Gordon, Carol Kerven, Fred Provenza, 2022-09-27 This Research Topic is hosted in partnership with the Grazing in Future Multi Scapes international workshop. The workshop will be held online 30th May–5th June 2021. Throughout different landscapes of the world, grazing herbivores fulfill essential roles in ecology, agriculture, economies, and cultures, including families, farms, and communities. Not only do livestock provide food and wealth; they also

deliver ecosystem services through the roles they play in environmental composition structure and dynamics Grazing as a descriptive adjective locates herbivores within a spatial and temporal pastoral context where they naturally graze or are grazed by farmers ranchers shepherds etc In many cases however pastoralism with the single objective of maximizing animal production and or profit has transformed landscapes diminishing biodiversity reducing water and air quality accelerating loss of soil and plant biomass and displacing indigenous animals and people These degenerative landscape transformations have jeopardized present and future ecosystem and societal services breaking the natural integration of land water air health society and culture Land users policy makers and societies are calling for alternative approaches to pastoral systems a call for diversified adaptive and integrative agro ecological and food pastoral systems designs that operate across multiple scales and scapes e g thought social land food health wild scapes simultaneously There needs to be a paradigm shift in pastoral production systems and how grazing herbivores are managed grazed within them derived initially from a change in perception of how they provide wealth The thoughtsapes will include paradigm shifts where grazers move away from the actual archetype of pastoralism future landscapes are re imagined and regenerative and sustainable management paradigms are put in place to achieve these visions From this will come a change in collective thinking of how communities and cultures socialscapes perceive their relationships with pastoral lands The landscapes are the biotic and abiotic four dimensional domains or environments in need of nurture Landscapes are the tables where humans and herbivores gain their nourishment i e foodscapes Foodscapes and dietary perceptions dictate actions and reactions that are changing as developed countries grapple with diseases related to obesity and people starve in developing countries Societies are demanding healthscapes and nutraceutical foodscapes and paradoxically some are moving away from animal products While indigenous species of animals including humans wildscapes have been displaced from many of their lands by monotonic pastoralism multifunctional pastoral systems can be designed in view of dynamic multi scapes of the future The purpose of this Research Topic is to influence future mental and practical models of pastoralism in continually evolving multi scapes We seek a collection of papers that will cultivate such a shift in thinking towards future models of sustainable multipurpose pastoralism The contributions will be synthesized to establish how multifunctional pastoral systems can be re imagined and then designed in view of the integrative dynamics of sustainable future multi scapes
