Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

Computational Models of American Speech Mary Margaret Withgott, Francine R. Chen, 1993-03 A new perspective on phonetic variation is achieved in this volume through the construction of a series of models of spoken American English In the past computer theorists and programmers investigating pronunciation have often relied on their own knowledge of the language or on limited transcription data Speech recognition researchers on the other hand have drawn on a great deal of data but without examining in detail the information about pronunciation the data contains The authors combine the best of each approach to develop probabilistic and rule based computational models of transcription data An ongoing controversy in studies of phonetic variation is the existence and proper definition of a phonetic unit The authors argue that assumptions about the units of spoken language are critical to a computational model Their computational models employ suprasegmental elements such as syllable boundaries stress and position in a unit called a metrical foot The use of such elements in modeling data enables the creation of better computational models for both recognition and synthesis technology This book should be of interest to speech engineers linguists and anyone who wishes to understand symbolic systems of communication

The Proceedings of the 27th Annual Child Language Research Forum Eve V. Clark, 1995 Since its inception in 1967 the Forum has provided an informal but critical setting for the presentation of new ideas and research on first language acquisition The Forum itself is sponsored by the Linguistics Department at Stanford and is organised by graduate students In this volume the contributors explore their findings in language acquisition in a variety of the world s languages The papers presented here reflect the diversity of interests in the field and the range of languages being studied This volume makes an empirical as well as a theoretical contribution to linguistic research

Language and Learning for Robots Colleen Crangle, Patrick Suppes, 1994 This book develops the notion of an instructable robot one which derives its intelligence in part from interaction with humans Since verbal interaction with a robot requires a natural language semantics the authors propose a natural model semantics which they then apply to the interpretation of robot commands

USMARC Format for Bibliographic Data, 1998 The Syntax of Anaphoric Binding Mary Dalrymple, 1993-07 Mary Dalrymple provides a theory of the syntax of anaphoric binding couched in the framework of Lexical Functional Grammar Cross linguistically anaphoric elements vary a great deal One finds

long and short distance reflexives sometimes within the same language pronominals may require local noncoreference or coreference only with nonsubjects Analyses of the syntax of anaphoric binding which have attempted to fit all languages into the mold of English are inadequate to account for the rich range of syntactic constraints that are attested How then can the cross linguistic regularities exhibited by anaphoric elements be captured while at the same time accounting for the diversity that is found Dalrymple shows that syntactic constraints on anaphoric binding can be expressed in terms of just three grammatical concepts subject predicate and tense These concepts define a set of complex constraints combinations of which interact to predict the wide range of universally available syntactic conditions that anaphoric elements obey Mary Dalrymple is a member of the research staff of the Natural Language Theory and Technology group at the Xerox Palo Alto Research Center

Lexical Matters Anna Szabolcsi,Ivan Sag,1992-06 This volume contains new research on the lexicon and its relation to other aspects of linguistics These essays put forth empirical arguments to claim that specific theoretical assumptions concerning the lexicon play a crucial role in resolving problems pertaining to other components of grammar Topics include syntactic semantic interface in the areas of aspect argument structure and thematic roles lexicon based accounts of quirky case anaphora and control the boundary between the lexicon and syntax in the domains of sentence comprehension and nominal compounding and the possibility of extending the concept of blocking beyond the traditional lexicon Ivan Sag is a professor of linguistics at Stanford University Anna Szabolcsi is an associate professor of linguistics at UCLA
