Harris, Brian Roach, 2017-06-26 Environmental issues are of fundamental importance and a broad approach to understanding the relationship of the human economy and the natural world is essential. Now in its fourth edition this book includes new material on climate change the cost competitiveness of renewable energy global environmental trends and sustainable economies. The text provides a balanced treatment of both standard environmental economics and ecological economics based on the belief that these two approaches are complementary. Several chapters focus on the core concepts of environmental economics including the theory of externalities the management of public goods the allocation of resources across time environmental valuation and cost benefit analysis. Material on ecological economics includes such topics as macroeconomic scale entropy and green national accounting. Topical chapters focus on energy climate change water resources international trade forests fisheries and agriculture with an emphasis on designing effective policies to promote sustainability and a green economy.
