## **Soft Computing In Financial Engineering:**

**Soft Computing in Financial Engineering** Rita A. Ribeiro, Hans-Jürgen Zimmermann, Ronald R. Yager, 1999-01-22 The focus is on the application of soft computing to a new emerging discipline called financial engineering Financial engineering can be seen as a field emerging out of an attempt to address the issues of concern in finance with the tools and perspectives of engineering especially electrical and systems engineering The ability to measure almost all financial variables in quantifiable terms the strong emphasis on optimization and the centrality of time dependency provide for a strong overlap of those disciplines This all provides a synergistic effect and makes it possible to more effectively and efficiently deal with a variety of problems related to broadly perceived financial analyses

**Soft Computing in Economics and Finance** Ludmila Dymowa, 2011-01-21 Currently the methods of Soft Computing are successfully used for risk analysis in budgeting e commerce development portfolio selection Black Scholes option pricing models corporate acquisition systems evaluating investments in advanced manufacturing technology interactive fuzzy interval reasoning for smart web shopping fuzzy scheduling and logistic An essential feature of economic and financial problems is that there are always at least two criteria to be taken into account profit maximization and risk minimization Therefore the economic and financial problems are multiple criteria ones In this book a new systematization of the problems of multiple criteria decision making is proposed which allows the author to reveal unsolved problems The solutions of them are presented as well and implemented to deal with some important real world problems such as investment project s evaluation tool steel material selection problem stock screening and fuzzy logistic It is well known that the best results in real world applications can be obtained using the synthesis of modern methods of soft computing Therefore the developed by the author new approach to building effective stock trading systems based on the synthesis of fuzzy logic and the Dempster Shafer theory seems to be a considerable contribution to the application of soft computing method in economics and finance An important problem of capital budgeting is the fuzzy evaluation of the Internal Rate of Return In this book this problem is solved using a new method which makes it possible to solve linear and nonlinear interval and fuzzy equations and systems of them The developed new method allows the author to obtain an effective solution of the Leontjev s input output problem in the interval setting

**Soft Computing Techniques and Applications in Financial Engineering** Tahseen Jilani, 2010-06 Soft Computing is an emerging approach which parallels the remarkable ability of the human brain to reason and learn in an environment of uncertainty and imprecision It is one of the most emerging consortiums of methodologies including artificial neural networks ANNs fuzzy logic FL etc They provide tractable robust and lower cost solutions to the complex and gigantic real world problems with the help of functional approximations and learning paradigms It can also handle linguistic uncertainties vagueness and imprecision involved in real life problems with reduced mathematical complexities Soft computing techniques have outperformed the conventional approaches with lesser complexity vagueness tuning requirements and higher level of

robustness and tractability On the other hand most of the actuarial problems are stochastic in nature with soaring noises and variable volatilities resulting in signals that are complicated to handle with conventional modeling and forecasting techniques
