## **Software Reuse With Ada:**

**Software Reuse with ADA** R. J. Gautier,Peter J. L. Wallis,1990 This collection of papers resulting from the work of the ADA Europe working group on software reuse includes discussion of several kinds of ADA software and guidelines for writing reusable ADA software components    **Software Reuse** James W. Hooper,Rowena O. Chester,2012-12-06 Observers in the present usually have an advantage when it comes to interpreting events of the past In the case of software reuse how ever it is unclear why an idea that has gained such universal accep tance was the source of swirling controversy when it began to be taken seriously by the software engineering community in the mid 1980 s From a purely conceptual point of view the reuse of software de signs and components promises nearly risk free benefits to the devel oper Virtually every model of software cost and development effort predicts first order dependencies on either products size or the num ber of steps carried out in development Reduce the amount of new product to be developed and the cost of producing the product de creases Remove development steps and total effort is reduced By reusing previously developed engineering products the amount of new product and the number of development steps can be reduced In this way reuse clearly has a major influence on reducing total development cost and effort This of course raises the issue of from whence the reused products arise There has to be a prior investment in creating libraries of reuse products before reuse can be successfuL How can organizations with a bottom line orientation be enticed into contributing to a reuse venture Fortunately the economics of reuse l ressembles many other financial investment situations    **Analysis of the Impact of the Ada Runtime Environment on Software Reuse** ,1989

The number of applications using the Ada language is increasing rapidly with the availability of over 200 base and derived validated compilers Reports indicate that many of these applications have been successfully developed from reusable software parts or have been developed to yield reusable software parts In contrast of these reports other applications have identified deficiencies in the Ada RunTime Environment RTE that have necessitated restricted use of the Ada with a consequent impact on the potential reuse of Ada software Therefore improving the reuse of software in these applications depends to some extent upon careful analysis and understanding of the issues related to software reuse and the Ada RTE The latter applications typically comprise embedded Mission Critical Computer Resource MCCR systems that must satisfy real time performance constraints that are usually dependent upon specialized hardware These constraints have caused the intrusion of non Ada code into the applications and the exploitation of specific idiosyncrasies of the RTE that are within the semantic fringes of the Ada standard DoD83 While reducing the use of non Ada code may not be feasible for applications that must interact with special controls devices and weapon systems ameliorating the deleterious effects of deficiencies and idiomatic behavior of the RTE on the reuse of Ada parts must receive prompt attention KR    **Software Reuse with Ada** Christine E. Park,David Russell,1993    **An Approach for Constructing Reusable Software Components in Ada** ,1990 This paper discusses the topic of software reuse and is aimed at the software engineer who may actually be designing reusable

software The paper concentrates on many of the technical problems encountered when constructing reusable software components today This paper does not however focus on the general problem of reusable software design Instead it focuses on the Ada programming language and the problems software engineers may encounter when designing components in this language This paper is intended to be a companion to IDA Paper P 2494 Strategy and Mechanisms for Encouraging Reuse in the Acquisition of SDI Software P 2494 discusses the managerial and legal issues involved with software reuse *Reuse of Ada Software Modules* ,1988 Software module reuse using Ada is discussed in the context of the Standard Automated Remote to AUTODIN Host SARAH Software Development Project Reuse concepts are presented including designing finding and implementing reusable Ada components Reuse in the SARAH project is discussed in terms of reuse goals accomplishments and problems encountered achieving reuse goals including design comprises that had to be made Current impediments to software reuse are presented along with suggestions about how they might be improved Recommendations are given with reference to the current scope of potential reuse benefits [The Impact of Case Tools, ADA, and Software Reuse on a DOD Software Development Project](#) Loren J. Dugan,1996-03-01 Software continues to be the single greatest challenge facing DoD systems developers The criticality of software as a integral component of system design continues to grow in importance as DoD moves into the 21st Century To meet this ever increasing challenge software development organizations are incorporating new design requirements and practices into their development processes These new requirements practices properly implemented into the development process can reduce software development and maintenance costs and increase software quality and development productivity This thesis investigates the impact of three management selected software development requirements practices CASE tools Ada and software reuse on the progress of a particular DoD software development project known as Project X After a brief introduction the thesis presents background literature on the three development requirements of Project X The background literature is used to support the Project X case study Information required for the case study is obtained through interviews with Project X affiliated development personnel Interview results are analyzed and interpreted through a comparison with information found in the background literature Results of the case study identify several problems with management s plan to implement the three development requirements into Project X The thesis identifies specific root causes for the implementation problems and makes recommendations to reduce the impact of these problems on Project X and other present and future DoD software development projects *Tutorial, Software Reuse* Will Tracz,1988 An overview of the basic issues concerning software reuse with focus on mental and supplemental tools that support the concept Describes the processes including components software libraries methodologies Ada reuse experiences and object oriented computing Acidic paper no index Annotation *Software Reuse in Real-Time Environments* ,1989 This report examines the roles of several factors affecting the potential reuse of Ada software for realtime applications More specifically it examines the roles of the Ada language and common

package interfaces The Ada language is evaluated with regard to how well it meets several requirements for supporting reuse and how it could be revised to support reuse better The concept of common bridge package interfaces is introduced as a technique for enabling more software to be reused Three specific common package interfaces are examined in detail These are the MRTSI the POSIX Ada binding 1003 5 the POSIX realtime extension 1003 4 These interfaces are considered with respect to their individual potential for promoting software reuse their interactions and their potential for supporting and complementing Ada for realtime applications
