## Introduction

The following is an attempt to put together a complete, yet reasonably flexible template for the specification of software designs. Wherever possible, I have tried to provide guidelines (instead of prescribing requirements) for the contents of various sections and subsections of the document. Some may prefer to require more detailed subsections of a particular section, choosing one or more of the subsection topics from the list of guidelines provided. In this sense, this document is really a template for a template.

In devising this template, I have gleaned information from many sources, including various texts on Software Engineering (Pressman, Sommerville, and Van Vliet), Object-Oriented Development (Booch, Rumbaugh, Berard, and Wirfs-Brock), various SEI reports, DoD-Std and Mil-Std documentation requirements (2167/2167A), and IEEE documentation standards (particularly IEEE-1016 for software designs, and IEEE-830 for software requirements). I have made every effort *not* to assume or impose a particular software

Software Specification and Design John C. Munson, Ph.D., 2005-09-26 The rigors of engineering must soon be applied to the software development process or the complexities of new systems will initiate the collapse of companies that attempt to produce them Software Specification and Design An Engineering Approach offers a foundation for rigorously engineered software It provides a clear vision of what occurs at each stage of development parsing the stages of specification design and coding into compartments that can be more easily analyzed Formalizing the concepts of specification traceability witnessed at the software organizations of Rockwell IBM FSD and NASA the author proposes a strategy for software development that emphasizes measurement He promotes the measurement of every aspect of the software environment from initial testing through test activity and deployment operation This book details the path to effective software and design It recognizes that each project is different with its own set of problems so it does not propose a specific model Instead it establishes a foundation for the discipline of software engineering that is both theoretically rigorous and relevant to the real world engineering environment

### **Human-Computer Interaction - INTERACT**

'87 H.-J. Bullinger, B. Shackel, 2014-05-21 Since the first INTERACT Conference in September 1984 the field of Human Computer Interaction has received increasing attention from researchers and industrial practitioners the importance of the topic now being widely recognized Technological developments have made it possible to seek new solutions to the problem of supporting work processes by information technology and for designing the interface between user and the machine Computers have become an everyday and common tool in the work of many people This has motivated the development of an interdisciplinary field of research which now appears much more established than it was a few years ago The INTERACT forums provide the opportunity for regular presentation and discussion of new results from research and application by bringing together the various disciplines and research approaches on a worldwide basis

### **Industrial-Strength Formal**

**Methods in Practice** Michael G. Hinchey, Jonathan P. Bowen, 2012-12-06 Industrial Strength Formal Methods in Practice provides hands on experience and guidance for anyone who needs to apply formal methods successfully in an industrial context Each chapter is written by an expert in software engineering or formal methods and contains background information introductions to the techniques being used actual fragments of formalised components details of results and an analysis of the overall approach It provides specific details on how to produce high quality software that comes in on time and within budget Aimed mainly at practitioners in software engineering and formal methods this book will also be of interest to the following groups academic researchers working in formal methods who are interested in evidence of their success and in how they can be applied on an industrial scale and students on advanced software engineering courses who need real life specifications and examples on which to base their work

### **Multimedia Databases and Image Communication**

Maurizio Tucci, 2003-06-30 Multimedia technologies are rapidly attracting more and more interest every day The Internet as seen from the end user is one of the reasons for this phenomenon but not the only one Video on Demand is one of the buzzwords today but its real availability to the general public is yet to come Content providers such as publishers broadcasting companies and audio video production firms must be able to archive and index their productions for later retrieval This is a formidable task even more so when the material to be sorted encompasses many different types of several media and covers a time span of several years In order for such a vast amount of data to be easily available existing database design models and indexing methodologies have to be improved and refined In addition new techniques especially tailored to the various types of multimedia must be devised and evaluated For archiving and transmission data compression is another

issue that needs to be addressed In many cases it has been found that compression and indexing can be successfully integrated since compressing the data by filtering out irrelevancy implies some degree of understanding of the content structure

**A Methodology, Specification Language, and Automated Support Environment for Computer-aided Design Systems** Duane Robert Worley, Rand Corporation, 1986 Computer based systems are becoming increasingly complex and expensive and there is a need for extensive design prior to embarking upon costly implementation phases Many design tools and design techniques have been proposed and some have been built to stand alone They are at best loosely integrated with other tools They have much in common notably the construction and manipulation of models of the complex system under design and a high degree of interactivity A detailed study of areas of commonality guides the requirements definition of a computer aided design of computer systems CADPCS support nucleus The nucleus provides an integrated set of primitives A specification language targeted to the support nucleus allows description of the design model and human model interaction This paper hypothesizes that it is possible to define a methodology a specification language and an automated support environment suitable to the systematic development and execution of CADPCS systems The methodology is applied to UCLA's Systems Architect's Apprentice SARA system the test bed and the resulting SARA IDEAS system serves as an existence proof for the hypothesis Rand abstracts
