Soil And Aquifer Pollution Nonaqueous Phase Liquids Contamination And Reclamation:

Soil and Aquifer Pollution Hillel Rubin, Nava Narkis, Judith Carberry, 2013-03-09 The Water Research Institute at the Technion Israel Institute of Technology is proud to have initiated and sponsored the International Workshop Soil and Aquifer Pollution Non Aqueous Phase Liquids Contamination and Reclamation held May 13th 15th 1996 on the Technion campus in Haifa Groundwater contamination is one of the pressing issues facing Israel and other countries which depend on groundwater for water supply In Israel 60% of the water supply comes from groundwater most of it from two large aquifers The Coastal Aquifer underlies the area where the largest concentration of human activity already takes place and where much of future development is expected to occur It is a phreatic sandstone aquifer vulnerable to pollution from activities at the surface The Mountain Aquifer is recharged in the higher terrain to the east and flows first in a phreatic zone then confined westward and underneath the Coastal Aquifer This limestone aquifer has higher permeabilities and flow velocities so pollution can reach the groundwater quite readily Smaller local aquifers are also important components in the national water system While measures are taken to protect these aquifers from pollution there are locations where contamination has already occurred Furthermore accidental pollution may not be totally avoided in the future Therefore understanding the processes of groundwater contamination recommending the proper measures for preventing it and determining the best means for reclamation once pollution has occurred are of great practical importance Non aqueous phase liquids NAPLs are among the most significant contaminants

Handbook of Environmental Fluid Dynamics, Two-Volume Set Harindra Joseph Fernando, 2012-12-11 With major implications for applied physics engineering and the natural and social sciences the rapidly growing area of environmental fluid dynamics focuses on the interactions of human activities environment and fluid motion A landmark for the field this two volume handbook presents the basic principles fundamental flow processes modeling techniques and measurement methods used in the field along with critical discussions of environmental sustainability related to engineering aspects The first volume provides a comprehensive overview of the fundamentals and the second volume explores the interactions between engineered structures and natural flows

Handbook of Environmental Fluid Dynamics, Volume One Harindra Joseph Fernando, 2012-12-12 With major implications for applied physics engineering and the natural and social sciences the rapidly growing area of environmental fluid dynamics focuses on the interactions of human activities environment and fluid motion A landmark for the field the two volume Handbook of Environmental Fluid Dynamics presents the basic principles fundamental flow processes modeling techniques and measurement methods used in the study of environmental motions It also offers critical discussions of environmental sustainability related to engineering The handbook features 81 chapters written by 135 renowned researchers from around the world Covering environmental policy biological and chemical aspects it tackles important cross disciplinary topics such as sustainability ecology pollution micrometeorology and limnology Volume One Overview and Fundamentals provides a comprehensive overview of the basic principles It starts

with general topics that emphasize the relevance of environmental fluid dynamics research in society public policy infrastructure quality of life security and the law It then discusses established and emerging focus areas The volume also examines the sub mesoscale flow processes and phenomena that form the building blocks of environmental motions with emphasis on turbulent motions and their role in heat momentum and species transport As communities face existential challenges posed by climate change rapid urbanization and scarcity of water and energy the study of environmental fluid dynamics becomes increasingly relevant This volume is a valuable resource for students researchers and policymakers working to better understand the fundamentals of environmental motions and how they affect and are influenced by anthropogenic activities See also Handbook of Environmental Fluid Dynamics Two Volume Set and Volume Two Systems Pollution Modeling and Measurements

A Numerical Investigation of Metabolic Reductive Dechlorination in DNAPL Source Zones John Anthony Christ, 2005 Among the most intractable environmental remediation problems are those involving the release of dense non aqueous phase liquids DNAPLs such as chlorinated solvents to the subsurface Research efforts have focused on the use of numerical models to investigate reductions in contaminant concentrations due to partial mass removal and improvements in the performance of complementary source zone remediation technologies Previous numerical investigations however have been limited to two dimensional systems Furthermore a lack of models capable of simulating the most promising complementary technology metabolic reductive dechlorination has limited its application This work developed and applied compositional multiphase numerical simulators to examine the influence of dimensionality two dimensions versus three dimensions on DNAPL source zone simulations and to investigate the benefits of stimulating metabolic reductive dechlorination at a chlorinated ethene DNAPL contaminated site Results from the dimensionality investigation showed that the simulation of DNAPL migration entrapment and dissolution in two dimensions provided reasonable approximations to the behavior simulated in three dimensions Commonly employed saturation distribution and mass recovery metrics were approximately equivalent Flux averaged concentrations simulated in two dimensions however tended to be three to four times higher than those simulated in three dimensions This difference was attributed to dilution at the down gradient boundary An alternative metric mass flux reduction however yielded better agreement
