*Calculated Soil Moisture and Temperature Regimes of Africa* A. van Wambeke,1982      *Soils of the Past* Gregory J. Retallack,2012-12-06 Landscapes viewed from afar have a timeless quality that is soothing to the human spirit Yet a tranquil wilderness scene is but a snapshot in the steady stream of surficial change Wind water and human activities reshape the landscape by means of gradual to catastrophic and usually irreversible events Much of this change destroys past landscapes but at some times and places landscapes are buried in the rock record This work is dedicated to the discovery of past landscapes and their life through the fossil record of soils A long history of surficial changes extending back almost to the origin of our planet can be deciphered from the study of these buried soils or paleosols Some rudiments of this history and our place in it are outlined in a final section of this book But first it is necessary to learn something of the language of soils of what happens to them when buried in the rock record and which of the forces of nature can be confidently reconstructed from their remains Much of this preliminary material is borrowed from soil science but throughout emphasis is laid on features that provide most reliable evidence of landscapes during the distant geological past This book has evolved primarily as a text for senior level university courses in paleopedology the study of fossil soils      Soils on a Warmer Earth H.W.

Scharpenseel,M. Schomaker,A. Ayoub,1990-08-15 The theme of this book is a far reaching one and should attract great interest both in industrialized as well as in less developed countries Although the question of climate change and its effects on soil productivity is overshadowed by so many current events it is almost certain that this subject will remain on the international agenda for the years to come not only as science and research are concerned but also in relation to development policies agricultural policies and others especially since poor rich developed and developing countries are equally threatened by these problems      *Soil Responses to Climate Change* Mark D.A. Rounsevell,Peter J.

Loveland,2013-06-29 Soils will play a central role in mediating the impact of climate change on natural and managed ecosystems The book addresses the various responses of soil processes and properties to environmental change and highlights their contribution to the proper understanding of ecosystem behaviour Topics include Soil hydrology landscape evolution salinisation desertification soil nitrogen dynamics soil carbon soil microbiology soil erosion crop modelling

**Handbook of Soils and Climate in Agriculture** Victor J. Kilmer,2018-01-18 The sections in this handbook series reflect the input of different editors and advisory boards and as a consequence there is considerable variation in both the depth and coverage offered within a given area However an attempt has been made throughout to bring together pertinent information that will serve the needs of nonspecialists provide a quick reference to material that might otherwise be difficult to locate and furnish a starting point for further study The project was undertaken with the realization that the initial volumes in the series could have some obvious deficiencies that will necessitate subsequent revisions In the meantime it is felt that the primary objectives of the Sections Editors and their Advisory Boards has been met in this first Edition
