Solid Surfaces Proc Of The International:

Lectures On Solid Surfaces And Interfaces - Proceedings Of The International School On Surface Physics D S Wang, D H Shen, 1990-11-02 This proceedings contains 9 lectures given by active research scientists introducing the latest developments in the field of surface physics The main topics cover both experimental and theoretical aspects of the atomic and electronic structure of semiconductor surface its characterization by direct and inverse photoemission and STM chemisorption and bonding on semiconductor growth of III V compound semiconductor and metal surface metal semiconductor interface and metal silicides

Physics of Solid Surfaces 1981: Symposium Proceedings (Studies in Surface Science and Catalysis) ,2000-04-01 Physics of Solid Surfaces 1981 Symposium Proceedings Studies in Surface Science and Catalysis

Photochemistry on Solid Surfaces Takeshi Matsuura, M. Anpo, 1989-06-01 The latest developments in photochemistry on solid surfaces i e photochemistry in heterogeneous systems including liquid crystallines are brought together for the first time in a single volume Distinguished photochemists from various fields have contributed to the book which covers a number of important applications molecular photo devices for super memory photochemical vapor deposition to produce thin layered electronic semiconducting materials sensitive optical media the control of photochemical reactions pathways etc

Photochemistry on solid surfaces is now a major field and this book which provides an up to date and comprehensive overview of the subject will be of interest to a wide range of readers *Spillover and Mobility of Species on Solid Surfaces* A. Guerrero-Ruiz, I. Rodriguez-Ramos, 2001-08-02 Spillover and Mobility of Species on Solid Surfaces collects the papers which were presented at the Fifth International Conference Spillover either as oral or poster contributions as well as the summaries of the invited lectures This congress and its publication in the Studies on Surface Science and Catalysis series follow the tradition of previous conferences on spillover initiated in Lyon 1983 and continued in Leipzig 1989 Kyoto 1993 and Dalian 1997 For the fifth conference held in S L el Escorial Madrid the organising committee has attempted to compile representative contributions which illustrate the advances in understanding the spillover phenomenon since 1997 Spillover is a process taking place during the interface of gas reactant molecules mainly hydrogen and oxygen on solid surfaces However different contributions to the more general area of the chemistry at surfaces related with the mobility and migration of species diffusion through membranes fuel cell catalysts etc have also been included In fact the title of the present volume summarizes this attempt to extend the conference topics towards dynamics at surfaces Among the 70 contributions received the 56 accepted papers were selected on the basis of the reports of at least two international reviewers according to standards comparable to those applied for other specialised journals These papers are from 21 different countries *Solid Surfaces* ,1993 Equilibria and Dynamics of Gas Adsorption on Heterogeneous Solid Surfaces W.A. Steele, G. Zgrablich, W.

Rudzinski, 1996-12-17 The fact that the surfaces of real solids are geometrically distorted and chemically non uniform has long been realized by the scientists investigating various phenomena occurring on solid surfaces Even in the case when

diffraction experiments show a well organized bulk solid structure the surface atoms or molecules will usually exhibit a much smaller degree of surface organization In addition to the results obtained from electron diffraction this can be seen in the impressive images obtained from STM and AFM microscopies This geometric and chemical disorder is the source of the energetic heterogeneity for molecules adsorbing on real solid surfaces Hundreds of papers have been published showing that this heterogeneity is a major factor in determining the behaviour of real adsorption systems Studies of adsorption on energetically heterogeneous surfaces have proceeded along three somewhat separate paths with only minor coupling of ideas One was the study of adsorption equilibria on heterogeneous solid surfaces The second path was the study of time evolution of adsorption processes such as surface diffusion or adsorption desorption kinetics on heterogeneous surfaces and the third was the study of adsorption in porous solids or more generally adsorption in systems with limited dimensions The present monograph is a first attempt to provide a synthesis of the ways that surface geometric and energetic heterogeneities affect both the equilibria and the time evolution of adsorption on real solids The book contains 17 chapters written by a team of internationally recognized specialists some of whom have already published books on adsorption
