Soft Computing And Intelligent Systems Theory And Applications:

   Soft Computing and Intelligent Systems Design Fakhreddine O. Karray,Clarence W. De Silva,2004 Traditional artificial intelligence AI techniques are based around mathematical techniques of symbolic logic with programming in languages such as Prolog and LISP invented in the 1960s These are referred to as crisp techniques by the soft computing community The new wave of AI methods seeks inspiration from the world of biology and is being used to create numerous real world intelligent systems with the aid of soft computing tools These new methods are being increasingly taught at the upper end of the curriculum sometimes as an adjunct to traditional AI courses and sometimes as a replacement for them Where a more radical approach is taken and the course is being taught at an introductory level we have recently published Negnevitsky s book Karray and Silva will be suitable for the majority of courses which will be found at an advanced level Karray and de Silva cover the problem of control and intelligent systems design using soft computing techniques in an integrated manner They present both theory and applications including industrial applications and the book contains numerous worked examples problems and case studies Covering the state of the art in soft computing techniques the book gives the reader sufficient knowledge to tackle a wide range of complex systems for which traditional techniques are inadequate   *Soft Computing and Intelligent Systems Design: Theory, Tools and Applications* Karray,2004   **Soft Computing and Intelligent Systems** Madan M. Gupta,1999-10-28 The field of soft computing is emerging from the cutting edge research over the last ten years devoted to fuzzy engineering and genetic algorithms The subject is being called soft computing and computational intelligence With acceptance of the research fundamentals in these important areas the field is expanding into direct applications through engineering and systems science This book cover the fundamentals of this emerging filed as well as direct applications and case studies There is a need for practicing engineers computer scientists and system scientists to directly apply fuzzy engineering into a wide array of devices and systems   *Soft Computing Based Modeling in Intelligent Systems* Valentina Emilia Balas,János Fodor,Annamária R. Várkonyi-Kóczy,2009-03-03 The book Soft Computing Based Modeling in Intelligent Systems contains the tended works originally presented at the IEEE International Workshop SOFA 2005 and additional papers SOFA an acronym for SOFt computing and Applications is an international wo shop intended to advance the theory and applications of intelligent systems and soft computing Lotfi Zadeh the inventor of fuzzy logic has suggested the term Soft Computing He created the Berkeley Initiative of Soft Computing BISC to connect researchers working in these new areas of AI Professor Zadeh participated actively in our wo shop Soft Computing techniques are tolerant to imprecision uncertainty and partial truth Due to the large variety and complexity of the domain the constituting methods of Soft Computing are not competing for a comprehensive ultimate solution Instead they are complementing each other for dedicated solutions adapted to each specific pr lem Hundreds of concrete applications are already available in many domains Model based approaches offer a very challenging way to integrate a priori knowledge into procedures Due to their

flexibility robustness and easy interpretability the soft c puting applications will continue to have an exceptional role in our technologies The applications of Soft Computing techniques in emerging research areas show its mat ity and usefulness The IEEE International Workshop SOFA 2005 held Szeged Hungary and Arad Romania in 2005 has led to the publication of these two edited volumes This volume contains Soft Computing methods and applications in modeling optimisation and prediction
