Soft Computing Applications Valentina Emilia Balas, Lakhmi C. Jain, Marius Mircea Balas, 2017-08-31 These two volumes constitute the Proceedings of the 7th International Workshop on Soft Computing Applications SOFA 2016 held on 24-26 August 2016 in Arad, Romania. This edition was organized by Aurel Vlaicu University of Arad, Romania; University of Belgrade, Serbia; in conjunction with the Institute of Computer Science Iasi Branch of the Romanian Academy; IEEE Romanian Section; Romanian Society of Control Engineering and Technical Informatics; SRAIT Arad Section; General Association of Engineers in Romania; Arad Section; and BTM Resources Arad. The soft computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness, and lower costs. Soft computing facilitates the combined use of fuzzy logic, neurocomputing, evolutionary computing, and probabilistic computing, leading to the concept of hybrid intelligent systems. The rapid emergence of new tools and applications calls for a synergy of scientific and technological disciplines in order to reveal the great potential of soft computing in all domains. The conference papers included in these proceedings, published post-conference, were grouped into the following areas of research: Methods and Applications in Electrical Engineering; Knowledge Based Technologies for Web Applications; Cloud Computing; Security Algorithms and Computer Networks; Biomedical Applications; Image, Text, and Signal Processing; Machine Learning and Applications; Business Process Management; Fuzzy Applications; Theory and Fuzzy Control; Computational Intelligence in Education; Soft Computing; Fuzzy Logic in Biometrics; SCFLB; Soft Computing Algorithms Applied in Economy, Industry, and Communication Technology; Modelling and Applications in Textiles. The book helps to disseminate advances in selected active research directions in the field of soft computing along with current issues and applications of related topics. As such, it provides valuable information for professors, researchers, and graduate students in the area of soft computing techniques and applications. **Advanced**

**Soft Computing Techniques in Data Science, IoT and Cloud Computing** Sujata Dash, Subhendu Kumar Pani, Ajith Abraham, Yulan Liang, 2021-11-05 This book plays a significant role in improvising human life to a great extent. The new applications of soft computing can be regarded as an emerging field in computer science, automatic control, engineering, medicine, biology, application, natural environmental engineering, and pattern recognition. Now the exemplar model for soft computing is human brain. The use of various techniques of soft computing is nowadays successfully implemented in many domestic, commercial, and industrial applications due to the low cost and very high performance digital processors and also the decline price of the memory chips. This is the main reason behind the wider expansion of soft computing techniques and its application areas. These computing methods also play a significant role in the design and optimization in diverse engineering disciplines. With the influence and the development of the Internet of things (IoT) concept, the need for using soft computing techniques has become more significant than ever. In general, soft computing methods are closely similar to

biological processes than traditional techniques which are mostly based on formal logical systems such as sentential logic and predicate logic or rely heavily on computer aided numerical analysis Soft computing techniques are anticipated to complement each other The aim of these techniques is to accept imprecision uncertainties and approximations to get a rapid solution However recent advancements in representation soft computing algorithms fuzzy logic evolutionary computation machine learning and probabilistic reasoning generate a more intelligent and robust system providing a human interpretable low cost approximate solution Soft computing based algorithms have demonstrated great performance to a variety of areas including multimedia retrieval fault tolerance system modelling network architecture Web semantics big data analytics time series biomedical and health informatics etc Soft computing approaches such as genetic programming GP support vector machine firefly algorithm SVM FFA artificial neural network ANN and support vector machine wavelet SVM Wavelet have emerged as powerful computational models These have also shown significant success in dealing with massive data analysis for large number of applications All the researchers and practitioners will be highly benefited those who are working in field of computer engineering medicine biology application signal processing and mechanical engineering This book is a good collection of state of the art approaches for soft computing based applications to various engineering fields It is very beneficial for the new researchers and practitioners working in the field to quickly know the best performing methods They would be able to compare different approaches and can carry forward their research in the most important area of research which has direct impact on betterment of the human life and health This book is very useful because there is no book in the market which provides a good collection of state of the art methods of soft computing based models for multimedia retrieval fault tolerance system modelling network architecture Web semantics big data analytics time series and biomedical and health informatics
