Soft Methodology For Random Information Systems:

Computer Recognition Systems 2 Marek Kurzynski, Edward Puchala, Michal Wozniak, Andrzej Zolnierrek, 2007-10-18

This book presents the results of the 5th International Conference on Computer Recognition Systems CORES 07 held 22-25 October 2007 in Hotel Tumski Wroclaw Poland. It brings together original research results in both methodological issues and different application areas of pattern recognition. The contributions cover all topics in pattern recognition including, for example, classification and interpretation of text, video and voice.

Intelligent Information Processing and Web Mining

Mieczyslaw A. Kłopotek, Sławomir T. Wierzchoń, Krzysztof Trojanowski, 2006-05-28

The international conference Intelligent Information Processing and Web Mining IIS IIPWM 05 organized in Gdańsk Sopot on 13-16th June 2005 was a continuation of a long tradition of conferences on applications of Artificial Intelligence (AI) in Information Systems (IS) organized by the Institute of Computer Science of Polish Academy of Sciences in cooperation with other scientific and business institutions. The Institute itself is deeply engaged in research both in AI and IS and many scientists view it as a leading institution both in fundamental and applied research in these areas in Poland. The originators of this conference series Prof. M. Dąbrowski and Dr M. Michalewicz had in 1992 a long-term goal of bringing together scientists and industry of different branches from Poland and abroad to achieve a creative synthesis. One can say that their dream has come to reality. Scientists from various continents made their submissions to this conference. A brief look at the affiliations makes international cooperation visible. The research papers have either a motivation in concrete applications or are offsprings of some practical requests. This volume presents the best papers carefully chosen from a large set of submissions (about 45%). At this point we would like to express our thanks to the members of Programme Committee for their excellent job. Also we are thankful to the organizers of the special sessions accompanying this conference: Jan Komorowski, Adam Przepiórkowski, Zbigniew W.

Computational Intelligence for Knowledge-Based System Design Eyke Hüllermeier, Rudolf Kruse, Frank Hoffmann, 2010-06-17

The book constitutes the refereed proceedings of the 13th International Conference on Information Processing and Management of Uncertainty in Knowledge-Based Systems IPMU 2010 held in Dortmund, Germany, from June 28 to July 2, 2010. The 77 revised full papers were carefully reviewed and selected from 320 submissions and reflect the richness of research in the field of Computational Intelligence and represent developments on topics as machine learning, data mining, pattern recognition, uncertainty handling, aggregation and fusion of information as well as logic and knowledge processing.

Uncertainty Modeling for Data Mining Zengchang Qin, Yongchuan Tang, 2014-10-30

Machine learning and data mining are inseparably connected with uncertainty. The observable data for learning is usually imprecise, incomplete or noisy. Uncertainty Modeling for Data Mining: A Label Semantics Approach introduces label semantics, a fuzzy logic based theory for modeling uncertainty. Several new data mining algorithms based on label semantics are proposed and tested on real-world datasets. A prototype interpretation of label semantics and new prototype based data mining algorithms are also discussed. This book offers a valuable resource for

postgraduates researchers and other professionals in the fields of data mining fuzzy computing and uncertainty reasoning

Computer Recognition Systems Marek Kurzynski, Edward Puchala, Michal Wozniak, Andrzej Zolnierak, 2007-12-13 th This book contains papers accepted for presentation at the 4 International Conference on Computer Recognition Systems CORES 05 May 22 25 2005 Rydzyna Castle Poland This conference is a continuation of a series of conferences on similar topics KOSYR organized each second year since 1999 by the Chair of Systems and Computer Networks Wroclaw University of Technology An increasing interest to those conferences paid not only by home but also by foreign participants inspired the organizers to transform them into conferences of international range Our expectations that the community of specialists in computer recognizing systems will find CORES 05 a proper form of maintaining the tradition of the former conferences have been confirmed by a large number of submitted papers Alas organizational constraints caused a necessity to narrow the acceptance criteria so that only 100 papers have been finally included into the conference program The area covered by accepted papers is still very large and it shows how vivacious is scientific activity in the domain of computer recognition methods and systems It contains various theoretical approaches to the recognition problem based on mathematical statistics fuzzy sets morphological methods wavelets syntactic methods genetic algorithms artificial neural networks ontological models etc Most attention is still paid to visual objects recognition however acoustic textual and other objects are also considered Among application areas medical problems are in majority recognition of faces speech signals and textual information processing methods being also investigated

Soft Methodology and Random Information Systems Miguel López-Díaz, 2004-07-30 The analysis of experimental data resulting from some underlying random process is a fundamental part of most scientific research Probability Theory and Statistics have been developed as flexible tools for this analysis and have been applied successfully in various fields such as Biology Economics Engineering Medicine or Psychology However traditional techniques in Probability and Statistics were devised to model only a single source of uncertainty namely randomness In many real life problems randomness arises in conjunction with other sources making the development of additional softening approaches essential This book is a collection of papers presented at the 2nd International Conference on Soft Methods in Probability and Statistics SMPS 2004 held in Oviedo providing a comprehensive overview of the innovative new research taking place within this emerging field

Advances in Fuzzy Clustering and Its Applications Jose Valente de Oliveira, Witold Pedrycz, 2007-06-05 A comprehensive coherent and in depth presentation of the state of the art in fuzzy clustering Fuzzy clustering is now a mature and vibrant area of research with highly innovative advanced applications Encapsulating this through presenting a

Careful selection of research contributions this book addresses timely and relevant concepts and methods whilst identifying major challenges and recent developments in the area. Split into five clear sections: Fundamentals, Visualization, Algorithms and Computational Aspects, Real Time and Dynamic Clustering, and Applications and Case Studies, the book covers a wealth of novel, original and fully updated material and in particular offers a focus on the algorithmic and computational augmentations of fuzzy clustering and its effectiveness in handling high dimensional problems, distributed problem solving and uncertainty management, presentations of the important and relevant phases of cluster design including the role of information granules, fuzzy sets in the realization of human centricity, facet of data analysis as well as system modelling, demonstrations of how the results facilitate further detailed development of models and enhance interpretation aspects. A carefully organized illustrative series of applications and case studies in which fuzzy clustering plays a pivotal role. This book will be of key interest to engineers associated with fuzzy control, bioinformatics, data mining, image processing and pattern recognition while computer engineers, students and researchers in most engineering disciplines will find this an invaluable resource and research tool.

McKeown, Robert A. Leitch, 1993. **Information Systems** John Mingers, Frank A. Stowell, 1997. This text is intended to address fundamental questions arising from the on going debate about IS as a discipline. Information systems is a relatively new area of study having emerged over the last 20 years from domains which include computer and business systems analysis, computing and management science. As with any emerging field there are many conflicting views about the appropriate subject matter, its boundaries and its relationship to other disciplines. The book is a result of a series of seminars organized by UK Systems Society and Warwick University between 1992-1995. Each seminar had a particular theme relevant to the problems of the developing field of IS which attracted leading figures in the IS community. **Publicationes mathematicae** Kossuth Lajos Tudományegyetem.
