## Software Development Environments Case:

**Software Development Environments and Case Technology** Albert Endres, Herbert Weber, 1991-06-10 Software development environments are integrated sets of tools, techniques, and processes that assist in the systematic development of software products. They are intended to support all phases of the software development cycle: requirements definition, design, implementation, test, and maintenance. These Computer Aided Software Engineering (CASE) tools typically make use of graphic manipulation facilities and rely on some form of development database to exchange various types of design objects between tools. Facilitated by the availability of powerful workstations, implementations of these technologies are now within reach of every software developer. This volume presents the proceedings of a symposium organized by the GI Gesellschaft für Informatik, the GMD Gesellschaft für Mathematik und Datenverarbeitung, and ESEC European Software Engineering Conferences. The symposium brought together application development managers and top specialists involved in the selection and introduction of software development tools, leading developers of such tools, and well-known authorities from the research community. The proceedings contain first-hand information on practical experiences and requirements development directions and strategies, and key research issues and results.

**Computer-aided Software Engineering** Thomas J. Bergin, 1993-01-01 The successful implementation of CASE technology requires a long-term and comprehensive commitment to the pursuit of raising the quality of software design and ultimately improving the information management within the organization. Computer Aided Software Engineering: Issues and Trends for the 1990s and Beyond covers all aspects of preparing an organization for the successful implementation of a CASE program. Actual case studies, empirical research, and theoretical suppositions are used to assess how CASE is being used today and to predict future directions.

**Reference Model for Frameworks of Software Engineering Environments (SEE)** DIANE Publishing Company, 1994-03 Describes SEEs and assists the SEE architectural standardization process. Covers a set of services needed to describe environment frameworks. The particular services of the model are described to a degree that is complete enough for the model to be used to describe existing systems and proposals. Also adopted by the European Computer Manufacturers Assoc.

**Software Engineering** Jibitesh Mishra, 2011 Software Engineering covers both function-oriented as well as object-oriented (OO) approach and emphasizes on emerging areas such as web engineering, software maintenance, and component-based software engineering. This book further includes case studies on the ATM system and milk dispenser.

**Building Tightly Integrated Software Development Environments: The IPSEN Approach** Manfred Nagl, 1996-11-13 This coherently written book is the final report on the IPSEN project on Integrated Software Project Support Environments, devoted to the integration of tools for the development and maintenance of large software systems. The theoretical and application-oriented findings of this comprehensive project are presented in the following chapters: Overview, introduction, classification, and global approach. The outside perspective, tools environments, their integration and user interface, Internal conceptual modeling, graph grammar.

*Software Maintenance - A Management Perspective* Phaneendra Nath Vellanki, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems

Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
