Computers these days spend a fairly low fraction of their time computing In fact the very word computer has become something of a misnomer In the American History museum of the Smithsonian Institute in Washington D C there is an exhibit of early computers Three features of these machines are striking First they are enormous especially in comparison to their capabilities The museum visitor who has just come from the Natural History building next door may be reminded of fossilized dinosaur bones Second they don't look at all like modern computing machines The cases are made of crude metal or beautifully worked wood recalling an approach to the design of scientific apparatus which belongs to a previous generation Lastly the function of these machines is mainly to compute to perform rapid arithmetic The computer of today bears little resemblance in size form or function to its ancestors It is most obviously smaller by several orders of magnitude Its form has changed from the carefully crafted one of a kind instrument to the mass produced microchip But the change in its function is perhaps the most dramatic of all Instead

of being a computing engine it is a machine for the processing of information The word processor has come into common usage A processor used to be a central processing unit a set of wires and vacuum tubes or later a set of printed circuit boards which was nestled deep within the computer Today a processor is an off the shelf component *Real-time Software Design* Philip Heller,1987 **Electronic Design** ,1986 1993 Product Line Handbooks: Microprocessors (2 v.) Corporate Vision and Rapid Technological Change Jas Gill, Peter Swann, 2002-03-11 This book examines the role of strategic visions of future technological development in the evolution of market structure. This perspective offers a novel way of resolving some of the puzzles that have arisen in understanding the effects of rapid technology change and market structure. Strategic visions are seen to play a central role in corporate strategy and industrial policy. The authors develop some theoretical tools to study these questions and present 5 case studies of high technology industries with conclusions for policy. The book will be of interest to industrial economists concerned with the effects of rapid technological change and to those interested in technology management. It will also be of interest to economists and others working in high technology industries and in government.
