Solar Heating Systems for Houses Werner Weiss,2003-11 The use of solar collectors for domestic hot water over the past 20 years has demonstrated that solar heating systems are now founded on a reliable and mature technology However the development of similar but more complex systems to provide both domestic hot water and space heating solar combisystems resulted in a diverse range of different designs that were not carefully optimized to reflect local climate and practice Application of energy efficient building strategies such as improved thermal insulation and use of low temperature heat supply systems is becoming increasingly common This trend combined with growing environmental awareness and the subsidies available in certain countries favours an increase in market share for solar combisystems The need for guidelines in selecting the appropriate system and designing this system according to the specific needs of the building and the local environment is therefore now increasingly pressing This book fills that need **Active Solar Heating Systems Design Manual** American Society of Heating, Refrigerating and Air-Conditioning Engineers,Solar Energy Industries Association,ACEC Research and Management Foundation,1988

English abstract Problem statement Solar products have been used more often in people's daily life with the development of

technology From year 2005 Chinese companies accelerated their development of solar panels Even China government has

started promoting companies to develop solar technology and use solar products Many companies and factories are

producing and selling the solar panels But there are no more than 20 factories that produce solar panel frames and less than

40 companies that sell solar frame only In fact the whole world is getting more interested in solar panel applications thus the

demand for solar panels is increasing as well As all we know each solar panel needs one solar frame a higher demand for

solar panel means a higher demand for solar frames as a result the current demand for solar frames exceeds of its supplies

Thus Joyance a Bedding company wants to conduct some marketing research about German solar frame's market to decide if

it should enter into the German market This dissertation aims to find out if Joyance should enter into solar frame market and

how to enter by the external and internal analysis Abstract This thesis describes analyses and evaluates Joyance's strategy to

enter the German market for solar panel frames Joyance originally is a manufacturer of bed frames On the basis of external

and internal analysis this thesis focuses on the general decision to enter the German market by using five force SWOT DOWS

and marketing matrix analysis The external analysis shows that the demand of German market for solar panel frames is

significant Our research shows that the market size of solar panel frame is around 47 million Euros in 2010 and is still

growing It is mainly due to the stimulation by Germany government The main suppliers for German market are Chinese solar

frame manufactories and wholesalers due to its cheap price and relatively good quality The five force analysis shows German

market is attractive due to its low threats for substitute products low entry barriers medium bargaining power for suppliers

and buyers and medium industry rivalry By using SWOT analysis 4P marketing mix Porter's generic strategies Ansoff's

marketing matrix and Kotler's STP we figure out Joyance should enter Germany market as a wholesaler by targeting the SME

of retailers and installation companies Its Finally TABLE OF CONTENTS PROBLEM STATEMENT 3 ABSTRACT 4 1
