Solar System Magnetic Fields:

Magnetic Fields in the Solar System Hermann Lühr, Johannes Wicht, Stuart A. Gilder, Matthias Holschneider, 2018-01-10 This book addresses and reviews many of the still little understood questions related to the processes underlying planetary magnetic fields and their interaction with the solar wind With focus on research carried out within the German Priority Program PlanetMag it also provides an overview of the most recent research in the field Magnetic fields play an important role in making a planet habitable by protecting the environment from the solar wind Without the geomagnetic field for example life on Earth as we know it would not be possible And results from recent space missions to Mars and Venus strongly indicate that planetary magnetic fields play a vital role in preventing atmospheric erosion by the solar wind However very little is known about the underlying interaction between the solar wind and a planet's magnetic field The book takes a synergistic interdisciplinary approach that combines newly developed tools for data acquisition and analysis computer simulations of planetary interiors and dynamos models of solar wind interaction measurement of ancient terrestrial rocks and meteorites and laboratory investigations

Solar System Magnetic Fields E.R. Priest, 2012-12-06 In September 1984 a Summer School on Solar System Plasmas was held at Imperial College with the support of the Science and Engineering Research Council An excellent group of lecturers was assembled to give a series of basic talks on the various aspects of the subject aimed at Ph D students or researchers from related areas wanting to learn about the plasma physics of the solar system The students were so appreciative of the lectures that it was decided to write them up as the present book Traditionally different areas of solar system science such as solar and magnetospheric physics have been studied by separate communities with little contact However it has become clear that many common themes cut right across these distinct topics such as magnetohydrodynamic instabilities and waves magnetic reconnect ion convection dynamo activity and particle acceleration The plasma parameters may well be quite different in the Sun's atmosphere a cometary tail Jupiter's magnetosphere but many of the basic processes are similar and it is by studying them in different environments that we come to understand them more deeply Furthermore direct in situ measurements of plasma properties at one point in the solar wind or the magnetosphere complement the more global view by remote sensing of a similar phenomenon at the Sun

Space Physics and Aeronomy, Magnetospheres in the Solar System Romain Maggiolo, Nicolas André, Hiroshi Hasegawa, Daniel T. Welling, 2021-04-14 Überblick über den aktuellen Wissensstand und künftige Forschungsrichtungen in der Magnetosphärenphysik In den sechs Jahrzehnten seit der Einführung des Begriffs Magnetosphäre sind über den magnetisierten Raum der jeden Körper in unserem Sonnensystem umgibt viele Theorien entstanden und viele Erkenntnisse gewonnen worden Jede Magnetosphäre ist einzigartig und verhält sich doch entsprechend den universellen physikalischen Vorgängen Der Band Magnetospheres in the Solar System enthält Beiträge von Experten für Experimentalphysik theoretische Physik und numerische Modellierung die einen Überblick über verschiedene Magnetosphären vermitteln von der winzigen Magnetosphäre

des Merkur bis zu den gewaltigen planetarischen Magnetosphären von Jupiter und Saturn Das Werk bietet insbesondere einen kompakten Überblick über die Geschichte der Magnetosphäre ihre Grundsätze und Gleichungen Eine Zusammenfassung der grundlegenden Prozesse in der Magnetosphärenphysik Instrumente und Techniken zur Untersuchung von Prozessen in der Magnetosphäre Eine besondere Schwerpunktsetzung auf die Magnetosphäre der Erde und ihre Dynamik Eine Darstellung der planetaren Magnetfelder und Magnetosphären im gesamten Sonnensystem Eine Definition der wichtigsten Forschungsrichtungen in der Magnetosphärenphysik Die Amerikanische Geophysikalische Vereinigung fördert die wissenschaftliche Erforschung der Erde und des Weltraums zum Wohle der Menschheit In ihren Publikationen werden wissenschaftliche Erkenntnisse veröffentlicht die Forschern Studenten und Fachkräften zur Verfügung stehen

The Magnetic Solar System Ulrich von Kusterow, Eckart Marsch, 2025-04-28 This book describes a great variety of significant space plasma processes and the eminent influence that in particular magnetic processes have on the formation structure and development of objects in our solar system Supported by vivid graphics real shots and links to video sequences all these processes are while being didactically prepared explained thoroughly with few mathematical derivations The book is written mainly for students but also for amateurs or scientists from various fields interested in space science It appeals to those who may want to gain a comprehensive overview of the far reaching impacts of magnetic fields on many things in our solar system or beyond in extrasolar planetary systems and stars in the distant universe The topics discussed here with emphasis on magnetism comprise the structure and dynamics of the solar system and its objects the solar interior and atmosphere the time variable solar activity the solar wind processes in the heliosphere and planetary magnetospheres as well as space weather Scientific instruments experiments and measurement methods are presented with the help of which solar and plasma physicists astrophysicists and planetary scientists can today gain their deep and fascinating insights Theoretical and numerical results are interpreted and recent observations are explained which were made by modern telescopes on Earth and obtained by satellites in space through either optical remote sensing and or in situ plasma measurements

Solar System: Retrospect and Prospect W. O'Reilly, 2012-12-06 On the 6th 7th and 8th April 1983 a conference entitled Magnetism planetary rotation and convection in the Solar System was held in the School of Physics at the University of Newcastle upon Tyne The purpose of the meeting was to celebrate the 60th birthday of Prof Stanley Keith Runcorn and his and his students and associates several decades of scientific achievement The social programme which consisted of excursions in Northumberland and Durham with visits to ancient castles and churches to Hexham Abbey and Durham Cathedral and dinners in Newcastle and Durham was greatly enjoyed by those attending the meeting and by their guests The success of the scientific programme can be judged by this special edition of Geophysical Surveys which is derived mainly from the papers given at the meeting The story starts in the late 1940s when the question of the origin of the magnetic field of the Earth and such other heavenly bodies as had at that time been discovered as having a magnetic field was exercising the minds of several scientists notably P M S Blackett at Manchester W M Elsasser at the University of Pennsylvania and E C Bullard at Cambridge Two alternative mechanisms were proposed In one the magnetic field was in some way connected with the distributed angular momentum of a rotating body in the other electric currents in conducting parts within the body were proposed as the source of magnetic field **Magnetic Fields of Force** Hermann Ebert, 1897 **Magnetic fields of force, tr. by C.V.
