Synergetics of Molecular Systems Lev N. Lupichev,Alexander V. Savin,Vasiliy N. Kadantsev,2014-08-19 Synergetics is the quantitative study of multicomponent systems that exhibit nonlinear dynamics and cooperativity This book specifically considers basic models of the nonlinear dynamics of molecular systems and discusses relevant applications in biological physics and the polymer sciences Emphasis is placed on specific solutions to the dynamical equations that correspond to the coherent formation of spatial temporal structures such as solitons kinks and breathers in particular The emergence of these patterns in molecular structures provides a variety of information on their structural properties and plays a significant part in energy transfer processes topological defects dislocations and related structure transitions Real media in which solitons take the form of solitary waves are also considered In this context the formation of nonlinear waves in a continuous medium described by nonlinear equations is associated with spontaneous breaking of the local symmetry of the homogeneous system which produces a range of interesting phenomena A particular feature of this text is its combination of analytic and computational strategies to tackle difficult nonlinear problems at the molecular level of matter

Self-Organization of Molecular Systems Nino Russo,Victor Ya Antonchenko,Eugene Kryachko,2009-05-21 Proceedings of the NATO Advanced Research Workshop on Molecular Self Organization From Molecules to Water to Nanoparticles to DNA and Proteins Kyiv Ukraine 8 12 June 2008

Theory of Solitons in Inhomogeneous Media Fatkhulla Khabibullaevich Abdullaev,1994-05-31 A systematic exposition concerned with the properties of solitons and their interaction as well as the generation of new structures This work deals exclusively with inhomogeneous media and the production and propagation of solitons in such media bringing the theory of soliton generation and propagation much closer to a wide range of physically significant applications

Solitons S. E. Trullinger,Vladimir Evgen'evich Zakharov,Valeriï Leonidovich Pokrovskii,1986 In the twenty years since Zabusky and Kruskal coined the term soliton this concept changed the outlook on certain types of nonlinear phenomena and found its way into all branches of physics The present volume deals with a great

variety of applications of the new concept in condensed matter physics which is particularly reached in experimentally observable occurrences The presentation is not centred around the mathematical aspects the emphasis is on the physical nature of the nonlinear phenomena occurring in particular situations With its emphasis on concrete mostly experimentally verifiable cases Solitons constitutes a very readable and instructive introduction to the subject as well as an up to date account of current developments in a field of research reaching maturity Reviews in Partial Differential Equations, 1980-86, as Printed in Mathematical Reviews ,1988 Waves Called Solitons M. Remoissenet,1996 This book is an elementary introduction to the fascinating world of waves called solitons These large amplitude waves which can propagate over long distances without dispersing and which display particle like properties are one of the most striking manifestations of nonlinearity The main concepts are introduced at an elementary level accessible to the undergraduate In a self contained and interdisciplinary whole such topics as electrical hydrodynamic chemical and optical solitons are discussed Many of the author s choices of emphasis have been made with experiments in mind several experiments can readily be performed by the reader This book is not meant for specialists but for students physicists engineers and practitioners The chapters are independently written in order that the reader should quickly find the required information The second edition of this highly praised book has new material especially on nonlinear transmission lines on various forms of modulational instabilities and on quantum optical solitons **The Dynamics of Systems with Chemical Reactions** J.
