**Comparative Genomics** Eric Tannier,2010-10-13 The complexity of genome evolution has given birth to exciting challenges for computational biologists A various range of algorithmic statistical mathematical techniques to elucidate the histories of molecules are developed each year and many are presented at the RECOMB satellite workshop on Comparative Genomics It is a place where scientists working on all aspects of comparative genomics can share ideas on the development of tools and their application to relevant questions This volume contains the papers presented at RECOMB CG 2010 held on October 9 11 in Ottawa The field is still flourishing as seen from the papers presented this year many developments enrich the combinatorics of genome rearrangements while gene order phylogenies are becoming more and more accurate thanks to a mixing of combinatorial and statistical principles associated with rapid and thoughtful heuristics Several papers tend to refine the models of genome evolution and more and more genomic events can be modeled from single nucleotide substitutions in whole genome alignments to large structural mutations or horizontal gene transfers      *Bioinformatics and Biomedical Engineering: New Advances* James Chou,Zhou Huaibei,2015-10-29 The 9th International Conference on Bioinformatics and Biomedical Engineering iCBBE 2015 was held on September 18 20 2015 Shanghai China This proceedings volume assembles papers from various professionals engaged in the fields of Biomedical Engineering Bioinformatics and Computational Biology The conference had special session
