The Architecture Of Alienation The Political Economy Of Professional Education:

Architecture and Alienation David Clarke, 1994-01-01 The debate over architecture has been raging for years shows no signs of abatement. In these entertaining yet serious essays Clarke traces the origin of the malaise of modern architecture to schools of architecture themselves both in the United States and France. He is also critical of contemporary artists, laments the fact that modern art has now lost its connection to architecture. Clarke believes that contemporary architects have alienated the public with hideous buildings; this disaffection will eventually result in the destruction of their profession. He urges renewed recognition of the interdependence of architecture and society of the humanities and architecture. This engagingly written work is an important cross-cultural commentary on the state of Western architecture and art education today. Clarke is professor of Advanced Technical Studies at Southern Illinois University, author of a number of books on architecture and environmental design. Includes an introduction by David Watkin, Head of the Department of History of Art at the University of Cambridge.

Architecture and Mathematics from Antiquity to the Future Kim Williams, Michael J. Ostwald, 2015-02-09 Every age and every culture has relied on the incorporation of mathematics in their works of architecture to imbue the built environment with meaning and order. Mathematics is also central to the production of architecture and its methods of measurement, fabrication and analysis. This two-volume edited collection presents a detailed portrait of the ways in which two seemingly different disciplines are interconnected. Over almost 100 chapters it illustrates and examines the relationship between architecture and mathematics. Contributors of these chapters come from a wide range of disciplines and backgrounds: architects, mathematicians, historians, theoreticians, scientists and educators. Through this work, architecture may be seen and understood in a new light by professionals as well as nonprofessionals. Volume I covers architecture from antiquity through Egyptian, Mayan, Greek, Roman, Medieval, Incan, Gothic and early Renaissance eras and styles. The themes that are covered range from symbolism and proportion to measurement and structural stability. From Europe to Africa, Asia and South America, the chapters span different countries, cultures and practices.

Architecture, Mentalities and Meaning Patrick Malone, 2017-06-14 In order to function, architectural theory and practice must be shaped to suit current cultural, economic and political forces. Thus, architecture embodies reductive logic that conditions the treatment of human and social processes, which raises the question of how to define objectivity for architectural mentalities that must conform to a set of immediate conditions. This book focuses on meaning and on the physical and mental processes that define life in built environments. The potential to draw knowledge from aesthetics, psychology, political economy, philosophy, geography and sociology is offset by the fact that architectural logic is inevitably reductive, cultural, socio-economic and political. However, despite the duty to conform, it is argued that the treatment of human processes and the understanding of architectural mentalities can benefit from interdisciplinary linkages, small freedoms and cracks in a system of imperatives that can yield the means of greater objectivity. This is valuable reading for students and researchers interested in architectural theory as a

working reality and in the relationships between architecture and other fields Political Economy of Development and Business Bhabani Shankar Nayak,2022-09-30 This book presents an alternative critical perspective on the political economy of development and business The everyday issues experienced by those on the margins are examined to highlight the Eurocentric bias at the centre of development theory public policy and business practices Ruling class projects within these areas are critically evaluated in order to present a vision of development that recognises pluralistic traditions and people's everyday experiences Eurocentric liberal myopia and its praxis are outlined in development theory public policy and business practices Particular focus is given to tribal planning needs based development public private partnerships modes of capital accumulation conscious capitalism and creative business education This book stands in defense of critical inquiry and pluriversal knowledge against the monolithic knowledge traditions and use of ruling class projects in development public policy and business ethics It aims to explore new forms of economic transformation that are inclusive and worker led It will be relevant to students and researchers interested in the political economy development economics and international business *Architectural Record* ,1995

The Persistence of the Classical Frank E. Salmon,2008-12-15 In this beautifully illustrated volume fifteen distinguished writers on architecture mark the retirement of Professor David Watkin from the University of Cambridge Linked by the common theme of classicism the chapters are divided into three sections The first is concerned with architectural ideas and includes essays on Renaissance interpretations of Vitruvius Roman Catholic Chapels in post Reformation London and architectural writers John Summerson and Hope Bagenal The central section deals with aspects of eighteenth and nineteenth century Neo classicism and includes new work on Marie Joseph Peyre Charles Barry and C R Cockerell The final section is devoted to studies of classicism and the Picturesque in the twentieth century
