discusses research findings on neurotransmitter neurohormone interactions in the control of the anterior pituitary. This book contains five chapters that specifically tackle the most salient constituents of the neural endocrine communication system in mammals. This book deals first with the biochemistry, physiology and pharmacology of proved or putative neurotransmitters as well as some of the techniques used for determining their synthesis or turnover in the central nervous system (CNS) of experimental animals or in man. These topics are followed by a discussion on the principal functions of the most well known neurotransmitter containing neurons based on sophisticated techniques for neurotransmitter measurements. A chapter highlights both traditional and a vast series of developed drugs that affect both neurotransmitter and neuroendocrine function. Discussions then shift to the experimental evidence on pituitary function control by the brain through releasing and inhibiting hormones secreted by hypothalamic neuroendocrine cells. The chemical isolation, identification and synthesis of hypothalamic neurohormones and concepts of their mechanism of action at the level of the pituitary cells. This text further explores the role of specific brain neurotransmitters in controlling pituitary hormone secretions in both experimental animals and in man and the possible CNS sites where neurotransmitters and neurohormones interact for the control of anterior pituitary secretion. The concluding chapter describes the actual or potential application of neuropharmacologic approaches to the diagnosis of and therapy for specific disorders of neuroendocrine function. Clinical neuroendocrinologists and researchers and students in neuroendocrinology, neurobiology, neuropharmacology, neurophysiology and psychiatry will find this book invaluable.

discusses the significant advances in neurotransmission and in understanding the physiology and pathophysiology of neuroendocrine control. This book is organized into seven chapters and begins with a discussion on the main biochemical and electrophysiological mechanisms underlying synaptic communication and the cotransmission and receptor plasticity. The following chapters describe the topographical localization and function of classical neurotransmitter and neuropeptide neurons. This book then presents the evidence on pituitary function control by the brain through specific hypophysiotropic regulatory hormones in relation to the secretion of adrenocorticotropic hormone and pro opiomelanocortin derived peptides, growth hormone, gonadotropins, prolactin and thyroid stimulating hormone. A chapter focuses on the neuroendocrine effects of an increasing number of neuropeptides. This text further deals with the role of pituitary gland as the target of central nervous system derived and peripheral hormonal influences. The concluding chapters look into the experimental evidence linking brain neurotransmitters to the secretion of hypothalamic hormones and to anterior pituitary hormones or to neuroendocrine feedback regulation. These chapters also explore the evidence for neurotransmitter/neuropeptide dysfunction as an etiology for specific neuroendocrine disorders and the potential of the neuropharmacologic approach to the diagnosis and therapy. Clinical neuroendocrinologists and researchers and students in neuroendocrinology
