River Sedimentation Silke Wieprecht, Stefan Haun, Karolin Weber, Markus Noack, Kristina Terheiden, 2016-11-30
Sediment dynamics in fluvial systems is of great ecological economic and human health related significance worldwide. Appropriate management strategies are therefore needed to limit maintenance costs as well as minimize potential hazards to the aquatic and adjacent environments. Human intervention ranging from nutrient pollutant release to physical modifications has a large impact on sediment quantity and quality and thus on river morphology as well as on ecological functioning. Truly understanding sediment dynamics requires as a consequence a multidisciplinary approach. *River Sedimentation* contains the peer reviewed scientific contributions presented at the 13th International Symposium on River Sedimentation ISRS 2016 Stuttgart Germany 19-22 September 2016 and includes recent accomplishments in theoretical developments, numerical modelling, experimental laboratory work, field investigations and monitoring as well as management methodologies.
