Slow Potential Changes In The Human Brain:

Slow Potential Changes in the Human Brain W.C. McCallum, S.H. Curry, 2013-11-11 This volume is based on the proceedings of a NATO Advanced Research Workshop on Slow Potential Changes in the Human Brain that was held at II Ciocco Tuscany Italy over the period 13-16th May 1990. The Workshop Director was Dr W C McCallum of the Burden Neurological Institute Bristol England. The meeting was superbly organised and proved to be both stimulating and productive. On behalf of everyone who attended the meeting I would like to express my appreciation to NATO for the provision of funding and to providing such a marvellous conference venue. I must apologise to everyone who has contributed to this volume for the length of time it has taken to produce a finished book. As you are all aware the untimely death of Cheyne McCallum who was to have been the sole editor of this volume was very disruptive to both the book and myself. Following Cheyne's death I assumed the responsibility for completing the book as was his wish. I would like to thank you all for your patience and understanding. I would like to acknowledge my indebtedness to the Burden Neurological Institute in general and very specifically to Mrs Chris Gough who has laboured extensively in the production of this volume.

Engineering Psychophysiology Wolf Boucsein, 2000-04-01 This volume promotes engineering psychophysiology as a discipline and demonstrates its value to a new audience who we hope will consist of ergonomists, human factors psychologists and engineers. The editors use a broad definition of what constitutes engineering including all aspects of the fields known as human engineering, industrial engineering and safety and systems engineering. The two goals for the volume are reflected in the subtitle. The Issues section introduces the components critical for the successful application of psychophysiological methods to problems in engineering. The chapters are intended to provide an introduction for the reader who is unfamiliar with psychophysiology and to provide the newcomer to the discipline with an overview of the basic theoretical measurement instrumentation and experimental design questions inherent in the use of psychophysiological methods. The Applications section illustrates the many ways that psychophysiological methods are already being used in engineering applications. A broad definition of application is used to include laboratory and simulation research as well as field studies and all of the chapters address questions that are relevant for applying psychophysiological methods in the field. The editor's intent is to stimulate investigators to use these methods in new problem areas; therefore the content of the chapters varies widely from reviewing specific psychophysiological measures to reviewing work performed on specific engineering problems. **The**

Cognitive Neuropsychology of Attention Shane O'Mara, Vincent Walsh, 1994 The theme of this Special Issue is one that is ill served by the existing neuropsychological literature. A publication that collates reviews of the developmental, physiological, clinical and cognitive aspects of this topic is therefore timely and would prove valuable to clinicians, researchers and students alike. The underlying problem addressed by the invited contributors is how attention is manifest in the intact brain and how disorders of attention present themselves in the damaged brain. The topics to be covered will range from the physiology of

attention as revealed by single unit recording studies of extra striate cortex of monkeys and PET scans in humans and low frequency EEG recordings to disorders of attention after brain damage e g stroke and chronic pathological disorders of the brain e g dyslexia and mental retardation The range of contributions to the Special Issue demonstrates that the kinds of attentional processing required are determined by the task in hand Correspondingly the volume discusses attention in the parietal temporal and frontal lobes of the human and macaque brain investigated by clinical electrophysiological and behavioural methods Attentional processes are also shown to be distributed in the brain and the effects of diminished attentional capacities which do not result from focal brain lesions are discussed in the context of mental retardation and dyslexia
