## **Still Lives With Insects:**

*Modernism and Still Life* Claudia Tobin, 2020-03-02 This book takes an original approach to still life in modern literature and the visual arts by examining the potential for movement and transformation in the idea of stillness and the ordinary

**Still-Life as Portrait in Early Modern Italy** Ornate Lev-er, 2019-04-04 Still Life as Portrait in Early Modern Italy centers on the still life compositions created by Evaristo Baschenis and Bartolomeo Bettera two 17th century painters living and working in the Italian city of Bergamo. This highly original study explores how these paintings form a dynamic network in which artworks, musical instruments, books, and scientific apparatuses constitute links to a dazzling range of figures and sources of knowledge. Putting into circulation a wealth of cultural information and ideas and mapping a complex web of social and intellectual relations, these works paint a portrait of both their creators and their patrons while enacting a lively debate among humanist thinkers, aristocrats, politicians, and artists. Engaging with literary blockbusters and banned books, theatrical artifice, and music, and staging a war among the arts, Baschenis and Bettera capture the latest social intrigues, political rivalries, intellectual challenges, and scientific innovations of their time. In doing so, they structure an unstable economy of social, aesthetic, and political values that questions the notion of absolute truth while probing the distinctions between life and artifice, meaningless marks and meaningful signs.

**The Flowering of Ecology** Kay Etheridge, 2020-11-04 The Flowering of Ecology presents an English translation of Maria Sibylla Merian's 1679 caterpillar book, *Der Raupen wunderbare Verwandlung und sonderbare Blumen Nahrung*. Her processes in making the book and an analysis of its scientific content are presented in a historical context. Merian raised insects for five decades, recording the food plants, behavior, and ecology of roughly 300 species. Her most influential invention was an ecological composition in which the metamorphic cycles of insects (usually moths and butterflies) were arrayed around plants that served as food for the caterpillars. Kay Etheridge analyzes the 1679 caterpillar book from the viewpoint of a biologist, arguing that Merian's study of insect interactions with plants, the first of its kind, was a formative contribution to natural history.
