different priority levels allocated to them The process with the least priority magnitude is always picked next A process already allocated the processor can be preempted the CPU and allocation done to another process with higher priority when such a process arrives in the queue SJF with non preemptive operates in the normal procedure whereby the job with the least CPU burst in the waiting queue is always picked next for allocation of the CPU and the rest of the processes have to wait no matter their urgency Based on the introduction above it is essential to use the right CPU scheduling strategy to help us achieve   Intelligent Science and Intelligent Data Engineering Jian Yang,Fang Fang,Changyin Sun,2013-02-11 This book constitutes the proceedings of the third Sino foreign interchange Workshop on Intelligence Science and Intelligent Data Engineering IScIDE 2012 held in Nanjing China in October 2012 The 105 papers presented were carefully peer reviewed and selected from 429 submissions Topics covered include pattern recognition computer vision and image processing machine learning and computational intelligence knowledge discovery data mining and web mining graphics and computer visualization and multimedia processing and applications   **The Building News and Engineering Journal** ,1884
