The wonderful world of enameling fusing glass to metal under high temperature conditions is diverse. Practically anything made from enamel friendly metal can be enameled from vases to jewelry to buttons to metal mesh and solid forms. In the first edition published in 2002 Cohen explored this world as it was then but so much knowledge has been gained in the last 17 years that it was definitely time for an update. Every chapter and project has been completely reviewed, revised, and updated. It's a whole new book and one you will want in your reference library. The look and organization is updated. 15 years of experience has been added about half the projects have changed and two types of mini projects to expand your learning experience are included. In addition each project has a gallery of the work of other artists working in the same technique to give a view of other ways a technique can look and be used. Classic techniques such as champlev, cloisonn, and plique jour each have projects as do newer approaches such as the use of graphite pencil and enameling on steel. 21 project lessons in all. And you will find the extensive troubleshooting chapter indispensable. Silver Award Winner in Foreword Reviews Indie Awards in Hobbies Home 2019
