*Stereochemistry of Coordination Compounds* Alexander von Zelewsky,1996-06-03 This well illustrated and well referenced book provides a systematic introduction to the modern aspects of the topographical stereochemistry of coordination compounds which are made up of metal ions surrounded by other non metal atoms ions and molecules

Inorganic Stereochemistry D. L. Kepert,2012-12-06 Molecular stereochemistry is a fundamental aspect of all areas of chemistry It is especially important in inorganic chemistry where the coordination numbers are variable and occasionally quite high The present book evolved naturally from a series of articles written by Professor Kepert for Progr88 in Inorganic Chemistry elucidating aspects of the stereochemistry of inorganic compounds of coordination numbers 4-12 In the present volume Professor Kepert has added new sections and synthesized these individual chapters into a unified treatment updating his references when necessary to the most recent contributions in the literature and inter weaving the various themes as deemed appropriate The result is a major contribution describing the stereochemistry of coordination compounds having both unidentate and multidentate ligands The viability of the repulsion approach to stereochemistry is tested to the limit in this treatise and shown to be an extremely good way of rationalizing a diverse body of data
