Abel, 2012-12-06 I have written this book because I felt there was a need to bring together in one place the vast amount of research that has been published in the past 10 years concerning alcohol's effects on the conceptus My hope is that this book will be of value to the many clinicians basic research scientists social workers and others who are interested in this important issue The number of such publications continues to grow each year and it was a very difficult task to review even a proportion of them completely While I have cited many of these research studies only those that in my very subjective opinion warranted extended coverage were discussed In this regard much of my task was facilitated by the many excellent reviews that have already been written To those whose important contributions have not been discussed or cited I offer my sincere apologies Omission of these publications in most cases reflects my own personal interests or awareness rather than merit **Fetal Alcohol Syndrome** Institute of Medicine, Committee to Study Fetal Alcohol Syndrome, 1996-04-01 It sounds simple Women who drink while pregnant may give birth to children with defects so women should not drink during pregnancy Yet in the 20 years since it was first described in the medical literature fetal alcohol syndrome FAS has proved to be a stubborn problem with consequences as serious as those of the more widely publicized crack babies This volume discusses FAS and other possibly alcohol related effects from two broad perspectives diagnosis and surveillance and prevention and treatment In addition it includes several real life vignettes of FAS children The committee examines fundamental concepts for setting diagnostic criteria in general reviews and updates the diagnostic criteria for FAS and related conditions and explores current research findings and problems associated with FAS epidemiology and surveillance In addition the book describes an integrated multidisciplinary approach to research on the prevention and treatment of FAS The committee Discusses levels of preventive intervention Reviews available data about women and alcohol abuse and treatment among pregnant women Explores the psychological and behavioral consequences of

Genetics and Epigenetics of Fetal Alcohol Spectrum Disorders Feng C. Zhou, Stephen Mason, 2015-08-06 Women drinking during pregnancy can result in Fetal Alcohol Spectrum Disorder FASD which may feature variable neurodevelopmental deficits facial dysmorphology growth retardation and learning disabilities Research suggests the human brain is precisely formed through an intrinsic genetic cellular expression that is carefully orchestrated by an epigenetic program This program can be influenced by environmental inputs such as alcohol Current research suggests the genetic and epigenetic elements of FASD are heavily intertwined and highly dependent on one another As such now is the time for investigators to combine genetic genomic and epigenetic components of alcohol research into a centralized accessible platform for discussion Genetic analyses inform gene sets which may be vulnerable to alcohol exposure during early neurulation Prenatal alcohol exposure indeed alters expression of gene subsets including genes involved in neural specification hematopoiesis methylation chromatin remodeling histone variants eye and heart development Recently quantitative genomic mapping has revealed loci QTLs that mediate alcohol induced phenotypes identified between two alcohol drinking mouse strains One question to consider is besides the role of dose and stage of alcohol exposure why only 5% of drinking women deliver newborns diagnosed with FAS Fetal Alcohol Syndrome Studies are ongoing to answer this question by characterizing genome wide expression allele specific expression ASE gene polymorphisms SNPs and maternal genetic factors that influence alcohol vulnerability Alcohol exposure during pregnancy which can lead to FASD has been used as a model to resolve the epigenetic pathway between environment and phenotype Epigenetic mechanisms modify genetic outputs through alteration of 3D chromatin structure and accessibility of transcriptional machinery Several laboratories have reported altered epigenetics including DNA methylation and histone modification in multiple models of FASD During

development DNA methylation is dynamic yet orchestrated in a precise spatiotemporal manner during neurulation and coincidental with neural differentiation Alcohol can directly influence epigenetics through alterations of the methionine pathway and subsequent DNA or histone methylation acetylation Alcohol also alters noncoding RNA including miRNA and transposable elements TEs Evidence suggests that miRNA expression may mediate ethanol teratology and TEs may be affected by alcohol through the alteration of DNA methylation at its regulatory region In this manner the epigenetic and genetic components of FASD are revealing themselves to be mechanistically intertwined Can alcohol induced epigenomic alterations be passed across generations Early epidemiological studies have revealed infants with FASD like features in the absence of maternal alcohol where the fathers were alcoholics Novel mechanisms for alcohol induced phenotypes include altered sperm DNA methylation hypomethylated paternal allele and heritable epimutations These studies predict the heritability of alcohol induced epigenetic abnormalities and gene functionality across generations We opened a forum to researchers and investigators the field of FASD to discuss their insights hypotheses fresh data past research and future research themes embedded in this rising field of the genetics and epigenetics of FASD This eBook is a product of the collective sharing and debate among researchers who have contributed or reviewed each subject **Fetal Alcohol Spectrum Disorders** Barry Carpenter OBE, Carolyn Blackburn, Jo Egerton, 2013-10-08 Fetal alcohol spectrum disorders FASDs have emerged as a major phenomenon within the education health criminal justice and social care systems of many countries with current prevalence figures suggesting that one in a hundred children and young people have FASDs In this publication academics professionals and families from around the world have shared expertise and insights on FASDs Their combined interdisciplinary perspective makes an invaluable contribution to how we understand and address the complex social educational and health needs associated with this growing group of children and young people Articulating fundamental knowledge cutting edge initiatives and emerging trends in FASDs this book provides an evidence base that will enable services to identify and respond to the need for action on FASDs It recognises that families natural foster or adoptive are at the heart of this process and that their rich knowledge base grounded in their lived experience is crucial Any education social care criminal justice or health professional working with children and young people with FASDs and their families will find this book a seminal and authoritative resource **Fetal Alcohol Spectrum Disorders** James Lee Anderson, 2014-04-13 Drinking during pregnancy can cause brain damage leading to a range of developmental cognitive and behavioral problems which can appear at any time during childhood Fetal Alcohol Spectrum Disorders FASD is the umbrella term for the different diagnoses which include Fetal Alcohol Syndrome partial Fetal Alcohol Syndrome Alcohol related neurodevelopmental disorder and Alcohol related birth defects **Fetal alcohol syndrome** Ernest L. O'Malley, 2007 This multi author book will discuss the history and clinical presentation of Foetal Alcohol Spectrum Disorders FASD i e Fetal Alcohol Syndrome FAS and Alcohol Related

Neurodevelopmental Disorder ARND These developmental neuropsychiatric disorders result from prenatal exposure to alcohol during any gestational period of pregnancy The book will particularly address the co occurring presence of ADHD in patients with FASD ADHD is the most frequent neuropsychiatric presentation of FASD throughout the lifespan and it is particularly difficult to manage because the underlying pathophysiology is related to prenatal neurotoxic brain injury Although prenatal alcohol exposure and the resulting FASD is recognised as the commonest preventable cause of intellectual disability many clinicians and educators are not aware that 75 to 80% of the patients with FASD have I Q s over 70 Thus the neuropsychiatric presentation of FASD can often be unrecognised or misunderstood FASD are the true clinical masqueraders and ADHD is their most likely disguise The authors are all experienced professionals from a wide range of disciplines working throughout the USA and Canada They have been involved in the diagnosis research and management of FASD for many years and this book will bring their collective knowledge regarding management from infancy to adulthood to an inter professional audience
