*Literacy* Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that  
must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability  
to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in  
alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in  
print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although  
spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes  
involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there  
may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand  
requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell  
may necessitate more complete representations or more conscious access to them The learning processes that children use  
to acquire such cognitive systems in the brain and whether these same processes are universal across different languages  
and orthographies are central theoretical questions Most children learn to read and spell their language at the same time  
thus the coordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching  
approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and  
teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in  
neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize  
and review what has been accomplished so far and to further explore these general issues Contributions from different  
perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of  
literacy including cross orthographic research      Philippine Journal of Psychology ,1999      **October 2019 Monthly**
