 Proceedings of a symposium jointly organized by the IAEA and FAO Vienna 18 22 June 1990 The technology of mutation  
 induction has been accepted by plant breeders as a valuable additional tool for creating improved cultivars for agriculture  
 and horticulture It was amply demonstrated at the symposium that this technique has been applied with great success in  
 many annual seed propagated crops such as rice barley wheat cotton soybean and pea The technological problems identified  
 primarily concerned vegetatively propagated crops and in general the logistic difficulties in identifying desirable mutants in
