*Stereotype Threat* Michael Inzlicht, Toni Schmader, 2012 The 21st century has brought with it unparalleled levels of diversity in the classroom and the workforce. It is now common to see in elementary school, high school, and university classrooms, not to mention boardrooms and factory floors, a mixture of ethnicities, races, genders, and religious affiliations. But these changes in academic and economic opportunities have not directly translated into an elimination of group disparities in academic performance, career opportunities, and levels of advancement. Standard explanations for these disparities, which are vehemently debated in the scientific community and popular press, range from the view that women and minorities are genetically endowed with inferior abilities to the view that members of these demographic groups are products of environments that frustrate the development of the skills needed for success. Although these explanations differ along a continuum of nature vs. nurture, they share in common a presumption that a large chunk of our population lacks the potential to achieve academic and career success. In contrast, intractable factors like biology or upbringing. The research summarized in this book suggests that factors in one's immediate situation play a critical yet underappreciated role in temporarily suppressing the intellectual performance of women and minorities, creating an illusion of group differences in ability. Research conducted over the course of the last fifteen years suggests the mere existence of cultural stereotypes that assert the intellectual inferiority of these groups creates a threatening intellectual environment for stigmatized individuals, a climate where anything they say or do is interpreted through the lens of low expectations. This stereotype threat can ultimately interfere with intellectual functioning and academic engagement, setting the stage for later differences in educational attainment, career choice, and job advancement.

**Making Software** Andy Oram, Greg Wilson, 2010-10-14 Many claims are made about how certain tools, technologies, and practices improve software development. But which claims are verifiable, and which are merely wishful thinking? In this book, leading thinkers such as Steve McConnell, Barry Boehm, and Barbara Kitchenham offer essays that uncover the truth and unmask myths commonly held among the software development community. Their insights may surprise you: Are some programmers really ten times more productive than others? Does writing tests first help you develop better code faster? Can code metrics predict the number of bugs in a piece of software? Do design patterns actually make better software? What effect does personality have on pair programming? What matters more, how far apart people are geographically or how far apart they are in the org chart? Contributors include Jorge Aranda, Tom Ball, Victor R. Basili, Andrew Begel, Christian Bird, Barry Boehm, Marcelo Cataldo, Steven Clarke, Jason Cohen, Robert DeLine, Madeline Diep, Hakan Erdogmus, Michael Godfrey, Mark Guzdial, Jo E. Hannay, Ahmed E. Sex Differences in Cognitive Abilities Diane F. Halpern, 2013-03-01 The fourth edition of *Sex Differences in Cognitive Abilities* critically examines the breadth of research on this complex and controversial topic with the principal aim of helping the reader to understand where sex differences are found and where they are not. Since the publication of the third edition there have been many exciting and illuminating developments in our understanding of cognitive sex differences. Modern neuroscience has transformed our understanding of the mind and behavior in general but particularly the way we think about cognitive sex differences. But neuroscience is still in its infancy and has often been misused to justify sex role stereotypes. There has also been the publication of many exaggerated and unreplicated claims regarding cognitive sex differences. Consequently throughout the book there is recognition of the critical importance of good research, an amiable skepticism of the nature and strength of evidence behind any claim of sex difference, an appreciation of the complexity of the questions about cognitive sex differences and the ability to see multiple sides of an issue while also realizing that some claims are well reasoned and supported by data and others are politicized pseudoscience. The author endeavors to present and interpret all the relevant data fairly and in the process reveals how there are strong data for many different views. The book explores sex differences from many angles and in many settings including the effect of different abilities and levels of education on sex differences, pre-existing beliefs or stereotypes, culture and hormones. Sex differences in the brain are explored along with the stern caveat to mind the gap between brain structures and behaviors. Readers should come away with a new understanding of the way nature and nurture work together to make us unique individuals while also creating similarities and differences that are often but not always tied to our being female and male. *Sex Differences in Cognitive Abilities* Fourth Edition can be used as a textbook or reference in a range of courses and will inspire the next generation of researchers. Halpern engages readers in the big societal questions that are inherent in the controversial topic of whether, when and how much males and females differ psychologically. It should be

required reading for parents teachers and policy makers who want to know about the ways in which males and females are different and similar
