Textile Scouring and Bleaching Edward Russell Trotman,1968      *Chemistry of the Textiles Industry* C. Carr,2012-12-06

The manufacture and processing of textiles is a complex and essential industry requiring many diverse skills to ensure profitability New products are continually being developed and reflect the energy and innovation of those working in the field This book focuses on the technological aspects of the chemical processing of textiles and on the modifications necessary for specific work environments Coverage ranges from fibre structure and its relationship to tensile properties textile aesthetics comfort physiology and end use performance through to the effect of domestic processing by the consumer on the textile product The industry is constantly under environmental pressure and the book examines the nature of environmental control and the development of alternative technology to produce less environmental impact In order to provide a balanced view of the current situation authors have been drawn from academia research institutes and industry to produce a text that will be useful to both industrial readers and university students In conclusion I would like to thank the authors for their dedication and their contributions      *Textile Scouring and Bleaching* Edward Russell Trotman,1968      **Textile Scouring and Bleaching** Robert Edward Trotman,1974      **Textile Processing and Properties** T.L. Vigo,2013-10-22

The type and amount of textile products have greatly proliferated over the last decade Concomitant textile processing to improve the properties and ultimate performance has also undergone dramatic changes Ready availability of instrumentation computers lasers and integration of these advances with similar progress in polymer material science have led to the need for a unified discussion on these topics The current book concisely discusses all aspects of textile processing modification and performance for four major topics preparation by fiber type dyeing and printing dye type theory and synthesis dye classification by structure and application improving functional and aesthetic textile properties physical chemical and physicochemical processes and concepts and performance chemical analysis instrumental methods physical chemical biological multiple influences and standard tests A detailed and logical progression from the initial purification of textiles to their performance and care is described The book will be useful as a text for textile polymer courses at undergraduate and graduate levels and as a comprehensive source of information for textile scientists engineers manufacturers retailers and others with an interest in textile products      Sustainable Coloration of Textiles Subramanian Senthilkannan

Muthu,2025-07-02 This volume provides a variety of cases on sustainable coloration of textiles It offers valuable insights and solutions to reduce the environmental impact of textile dyeing and pollution due to extensive use of water energy and toxic chemicals The cases presented in this book offer sustainable innovations and strategies to mitigate the impacts of textile coloration This work will serve as an essential resource for students educators and practitioners looking to understand and implement sustainable practices in textile production      Physico-chemical Aspects of Textile Coloration Stephen M.

Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a

diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO<sub>2</sub> fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration

*Textiles and Fashion* Rose Sinclair,2014-11-08 This major textbook is designed for students studying textiles and fashion at higher and undergraduate level as well as those needing a comprehensive and authoritative overview of textile materials and processes The first part of the book reviews the main types of natural and synthetic fibres and their properties Part two provides a systematic review of the key processes involved first in converting fibres into yarns and then transforming yarns into fabrics Part three discusses the range of range of finishing techniques for fabrics The final part of the book looks specifically at the transformation of fabric into apparel from design and manufacture to marketing With contributions from leading experts in their fields this major book provides the definitive one volume guide to textile manufacture Provides comprehensive coverage of the types and properties of textile fibres to yarn and fabric manufacture fabric finishing apparel production and fashion Focused on the needs of college and undergraduate students studying textiles or fashion courses Each chapter ends with a summary to emphasise key points a comprehensive self review section and project ideas are also provided **Textile Colorist and Converter** ,1922 [Green Chemistry for Sustainable Textiles](#) Nabil Ibrahim,Chaudhery

Mustansar Hussain, 2021-07-21 *Green Chemistry for Sustainable Textiles Modern Design and Approaches* provides a comprehensive survey of the latest methods in green chemistry for the reduction of the textile industry's environmental impact. In recent years, industrial R D has been exploring more sustainable chemicals as well as eco friendly technologies in the textile wet processing chain leading to a range of new techniques for sustainable textile manufacture. This book discusses and explores basic principles of green chemistry and their implementation along with other aspects of cleaner production strategies as well as new and emerging textile technologies providing a comprehensive reference for readers at all levels. Potential benefits to industry from the techniques covered in this book include Savings in water energy and chemical consumption waste minimization as well as disposal cost reduction and production of high added value sustainable textile products to satisfy consumer demands for comfort safety aesthetic and multi functional performance properties. Innovative emerging methods are covered as well as popular current technologies creating a comprehensive reference that facilitates comparisons between methods. Evaluates the fundamental green chemistry principles as drivers for textile sustainability. Explains how and why to use renewable green chemicals in the textile wet processing chain.
