**Hans Joachim Bunge**

## **Texture Analysis In Materials Science Mathematical Methods:**

Texture Analysis in Materials Science H.-J. Bunge, 2013-09-03 *Texture Analysis in Materials Science Mathematical Methods* focuses on the methodologies processes techniques and mathematical aids in the orientation distribution of crystallites. The manuscript first offers information on the orientation of individual crystallites and orientation distributions. Topics include properties and representations of rotations orientation distance and ambiguity of rotation as a consequence of crystal and specimen symmetry. The book also takes a look at expansion of orientation distribution functions in series of generalized spherical harmonics fiber textures and methods not based on the series expansion. The publication reviews special distribution functions texture transformation and system of programs for the texture analysis of sheets of cubic materials. The text also ponders on the estimation of errors texture analysis and physical properties of polycrystalline materials. Topics include comparison of experimental and recalculated pole figures indetermination error for incomplete pole figures and determination of the texture coefficients from anisotropic polycrystal properties. The manuscript is a dependable reference for readers interested in the use of mathematical aids in the orientation distribution of crystallites.

**Nondestructive Characterization of Materials II** Jean F. Bussière, Jean-Pierre Monchalin, Clayton O. Ruud, Robert E. Green, 2013-03-14 The possibility of nondestructively characterizing the microstructure morphology or mechanical properties of materials is certainly a fascinating subject. In principle such techniques can be used at all stages of a material's life from the early stages of processing to the end of a structural component's useful life. Interest in the subject thus arises not only from a purely scientific point of view but is also strongly motivated by economic pressures to improve productivity and quality in manufacturing to insure the reliability and extend the life of existing structures. The present volume represents the edited papers presented at the Second International Symposium on the Nondestructive Characterization of Materials held in Montreal Canada July 21 23 1986. The Proceedings are divided into eight sections which reflect the multidisciplinary nature of characterizing materials nondestructively. Polymers and Composites Ceramics and Powder Metallurgy Metals Layered Structures Adhesive Bonds Welding Degradation Aging Texture Anisotropy Stress and New Techniques Invited papers by R Hadcock of Grumman Aircraft Systems R Cannon of Rutgers University H Yada of Nippon Steel and R Bridenbaugh of Alcoa review respectively the processing of polymer matrix composites ceramics steel and aluminum emphasizing the need for material property sensors to improve process and quality control. Two other invited papers one by A Wedgwood of Harwell and the other by P Holler of the IzFP in Saarbrucken review
