opportunities to think about the application and integration of basic Human Movement theory. It confirms basic knowledge which is then applied to specific areas. Drawing on the expertise of a range of authors from the healthcare professions the new edition has adopted a themed approach that links chapters in context. The strength of this current edition is the explicit chapter integration which attempts to mimic the realities of human movement. The themed approach explores the psychosocial influences on movement. Integration is further facilitated by increased cross referencing between the chapters and the innovative use of one themed case study throughout. Framed about a family unit this case study enables chapter authors to explicitly apply the content of their chapters to the real world of human movement. Taken as a whole this more integrated format will enable readers to see the reality and complexity of human movement.

Biomedical Aspects of Manual Wheelchair Propulsion L. H. V. van der Woude, Maria T. E. Hopman, Cathelijne H. Kemenade, 1999. Mobility is fundamental to health social integration and individual well being of the human being. Henceforth mobility must be viewed as being essential to the outcome of the rehabilitation process of wheelchair dependent persons and to the successful re integration into society and to a productive and active life. Many lower limb disabled subjects depend upon a wheelchair for their mobility. Estimated numbers for the Netherlands Europe and USA are respectively 80 000 2 5 million and 1 25 million wheelchair dependent individuals. Groups large enough to allow a special research focus and conference activity. Both the quality of the wheelchair the individual work capacity the functionality of the wheelchair user combination and the effectiveness of the rehabilitation programme do indeed determine the freedom of mobility. Their optimization is highly dependent upon a continuous and high quality research effort in combination with regular discussion and dissemination with practitioners. The book intends to give a state of the art view on the current fundamental clinical and applied research findings and their consequences upon wheelchair propulsion arm work wheelchair training and possible consequences of a wheelchair confined life style. Also its implications for rehabilitation as well as alternative modes of ambulation and activity in the wheelchair confined population such as functional electrical stimulation and its possible future developments are dealt with.
