Heron,John Austin Vargo,2016-06-21 Stereotactic radiosurgery is a relatively recent radiation technique initially developed using a frame based system in 1949 by a Swedish neurosurgeon Lars Leksell for lesions not amenable to surgical resection Radiosurgery is founded on principles of extreme radiation dose escalation afforded by precise dose delivery with millimeter accuracy Building upon the success of frame based radiosurgery techniques which were limited to cranial tumors and invasive head frame placement advances in radiation delivery and image guidance have lead to the development of stereotactic body radiotherapy SBRT SBRT allows for frameless delivery of dose distributions akin to frame based cranial stereotactic radiosurgery to both cranial and extra cranial sites and has emerged as an important treatment strategy for a variety of cancers from the cranium to prostate Herein we highlight ongoing investigations for the clinical application of SBRT for a variety of primary and recurrence cancers aimed at examining the growing clinical evidence supporting emerging roles for SBRT in the ever growing oncologic armamentarium **Journal of the American Medical Association** ,2003 [The Politics of Representation in the Global Age](#) Peter A. Hall,Wade Jacoby,Jonah Levy,Sophie Meunier,2014-04-07 How has the process of political representation changed in the era of globalization The representation of interests is at the heart of democracy but how is it that some interests secure a strong voice while others do not While each person has multiple interests linked to different dimensions of his or her identity much of the existing academic literature assumes that interests are given prior to politics by a person's socioeconomic institutional or cultural situation This book mounts a radical challenge to this view arguing that interests are actively forged through processes of politics The book develops an analytic framework for understanding how representation takes place based on processes of identification mobilization and adjudication and explores how these processes have evolved over time Through a wide variety of case studies the chapters explore how actors identify their interests mobilize them into action and resolve conflicts among them **Crime and Justice, Volume 46** Michael Tonry,2017-02-22 Justice Futures Reinventing American Criminal Justice is the forty sixth volume in the Crime and Justice series Contributors include Francis Cullen and Daniel Mears on community corrections Peter Reuter and Jonathan Caulkins on drug abuse policy Harold Pollack on drug treatment David Hemenway on guns and violence Edward Mulvey on mental health and crime Edward Rhine Joan Petersilia and Kevin Reitz on parole policies Daniel Nagin and Cynthia Lum on policing Craig Haney on prisons and incarceration Ronald Wright on prosecution and Michael Tonry on sentencing policies [Crime and Justice, Volume 45](#) Michael Tonry,2017-02-22 Sentencing Policies and Practices in Western Countries Comparative and Cross national Perspectives is the forty fifth addition to the Crime and Justice series Contributors include Thomas Weigend on criminal sentencing in Germany since 2000 Julian V Roberts and Andrew Ashworth on the evolution of sentencing policy and practice

**Japan's Network Economy** James R. Lincoln, Michael L. Gerlach, 2004-08-16 Japan's economy has long been described as network centric. A web of stable reciprocated relations among banks, firms, and ministries is thought to play an important role in Japan's ability to navigate smoothly around economic shocks. Now those networks are widely blamed for Japan's faltering competitiveness. This book applies structural sociology to a study of how the form and functioning of this network economy has evolved from the prewar era to the late 90s. It asks whether in the face of deregulation, globalization, and financial disintermediation Japan's corporate networks, the keiretsu groupings, particularly have withered away, losing their cohesion and their historical function of supporting member firms in hard times. Using detailed quantitative and qualitative analysis, this book's conclusion is a qualified yes. Relationships remain central to the Japanese way of business but are much more subordinated to the competitive strategy of the enterprise than the network economy of the past.

Disembodied Brains John H. Evans, 2024 Until recently brains in vats and animals with partly human brains have been the realm of science fiction but recent research is making them real. In Disembodied Brains John H. Evans examines the viewpoints of professional ethicists and scientists on the implications of these new technologies and how those viewpoints contrast with the fearful intuitions of the general public

**Schizophrenia Bulletin**, 2010 A Quantitative Tour of the Social Sciences Andrew Gelman, Jeronimo Cortina, 2009-04-06

Social scientists become experts in their own disciplines but aren't always familiar with what is going on in neighboring fields. To foster a deeper understanding of the interconnection of the social sciences, economists should know where historical data come from, sociologists should know how to think like economists, political scientists would benefit from understanding how models are tested in psychology, historians should learn how political processes are studied, psychologists should understand sociological theories, and so forth. This overview by prominent social scientists gives an accessible, non-technical sense of how quantitative research is done in different areas. Readers will find out about models and ways of thinking in economics, history, sociology, political science, and psychology, which in turn they can bring back to their own work
