Statistical Analysis For Geographers:

Statistical Methods for Geographers W. A. V. Clark, P. L. Hosking, 1986-04-04 A textbook for advanced undergraduate first year graduate level courses in statistical methods in geography Presents methods useful in research design hypothesis testing and analyzing spatial and functional relationships Introduces basic statistical terms and techniques for displaying and describing distributions and covers a range of working methods including probability and sampling simple linear regression extensions of the simple linear model to multiple regression and its assumptions stepwise logit regression and canonical and discriminant analysis

Statistical Analysis in Geography Leslie J. King, 1969 Statistical Methods and the Geographer Stanley Gregory, 2014-09-25 First published in 1978 For the non mathematician however even the simpler introductory books on statistics often raise considerable problems In this second edition First some attention has been given to the problem of the transformation of data in order to reinforce the appreciation of the need for normally distributed data for the use of so many techniques Secondly the use of probability paper at least in simple terms has been introduced to illustrate the ways in which the labour of probability assessments can be circumvented Thirdly radical changes have been made plus considerable expansion added to the theme of non parametric testing to provide a more systematic approach to what is a most important group of possible techniques for geographers Fourthly change and expansion are also reflected in the sections on correlation and regression including some simple consideration of curvilinear relationships and the presentation of computational techniques more geared to the use of desk calculators rather than long hand methods Finally the bibliography has also been expanded to incorporate a wider range of books on techniques and a selection of research papers using such techniques in a geographical or near geographical context

Statistical Analysis for Geographers Daniel A. Griffith, Carl G. Amrhein, Joseph R. Desloges, 1991 **Statistical Methods for Geography** Peter Rogerson, 2001 Statistical Methods for Geography is a systematic introduction to the essential techniques that all students must understand to complete a module in statistical analysis It provides an integrated overview of spatial data and spatial data analysis Key features include An applied focus on methods for geographers the text presents a detailed discussion of regression analysis and autocorrelation the principal methods of statistical inference used in geography An introduction to the principles of spatial analysis and spatial patterns including probability and probability models hypothesis testing and sampling analysis of variance point patterns and patterns in areal data

Elementary Statistics for Geographers James E. Burt, Gerald M. Barber, David L. Rigby, 2009-03-19 Introduces the techniques and concepts of statistics in human and physical geography This book explains not only how to apply quantitative tools but also why and how they work It helps students gain important skills for utilizing conventional and spatial statistics in their own research as well as for critically evaluating the work of others

Statistical Analysis of Geographical Data Simon James Dadson, 2017-03-08 Statistics Analysis of Geographical Data An Introduction provides a comprehensive and accessible introduction to the theory and practice of statistical analysis in

geography It covers a wide range of topics including graphical and numerical description of datasets probability calculation of confidence intervals hypothesis testing collection and analysis of data using analysis of variance and linear regression Taking a clear and logical approach this book examines real problems with real data from the geographical literature in order to illustrate the important role that statistics play in geographical investigations Presented in a clear and accessible manner the book includes recent relevant examples designed to enhance the reader's understanding

Practical Statistics for Geographers and Earth Scientists Nigel Walford, 2025-03-17 A practice oriented and accessible introduction to geographical statistics In the newly revised Second Edition of Practical Statistics for Geographers and Earth Scientists distinguished researcher Nigel Walford delivers an authoritative and easy to follow introduction to the principles and applications of statistical analysis in a geographical context The book assists students in the development of competence in the statistical procedures necessary to conduct independent investigations field work and related geographical research projects The book explains statistical techniques relevant to geographical geospatial earth and environmental data It employs graphics and mathematical notation for maximum clarity Guidance is provided on how to formulate research questions to ensure that the correct data is collected for the chosen analysis method This new edition incorporates a new section on exploratory spatial analysis and spatial statistics It also offers A thorough introduction to first principles in the statistical analysis of geographical data including discussions of the quality content collection and acquisition of geographical data In depth treatments of geographical data exploration including the taking of statistical measures or quantities as well as frequency distributions probability and hypotheses Comprehensive explorations of testing times including parametric and nonparametric tests Insightful discussions of relationship investigation including correlation and regression as well as the spatial aspects of geographical data Perfect for undergraduates pursuing a degree in geography Practical Statistics for Geographers and Earth Scientists will also be a valuable tool for students in other earth and environmental sciences

An Introduction to Statistical Problem Solving in Geography Arthur J. Lembo, Jr., J. Chapman McGrew, Jr., 2023-10-27 The fourth edition of An Introduction to Statistical Problem Solving in Geography continues its standing as the definitive introduction to statistics and quantitative analysis in geography Assuming no reader background in statistics the authors lay out the proper role of statistical analysis and methods in human and physical geography They delve into the calculation of descriptive summaries and graphics to explain geographic patterns and use inferential statistics parametric and nonparametric to test for differences t tests ANOVA relationships regression and correlation and spatial statistics point and area patterns spatial autocorrelation This edition introduces more advanced topics including logistic regression two factor ANOVA and spatial estimation inverse distance weighting Kriging Many chapters also include thought provoking discussions of statistical concepts as they relate to the COVID 19 pandemic Maintaining an exploratory and investigative approach throughout the authors provide readers with real world geographic issues and more than 50 map examples Concepts are explained clearly

and narratively without oversimplification Each chapter concludes with a list of major goals and objectives An epilogue offers over 150 open ended geographic situations inviting students to apply their new statistical skills to solve problems currently affecting our world

An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe, 2009-04-22 Written for undergraduate geography majors and entry level graduate students with limited backgrounds in statistical analysis and methods McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem solving framework Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text Without compromising statistical rigor or oversimplifying the authors stress the importance of written narratives that explain each statistical technique After introducing basic statistical concepts and terminology the authors focus on nonspatial and spatial descriptive statistics They transition to inferential problem solving including probability sampling and estimation before delving deeper into inferential statistics for geographic problem solving The final chapters examine the related techniques of correlation and regression A list of major goals and objectives is included at the end of each chapter allowing students to monitor their own progress and mastery of geographic statistical materials An epilogue offering over 150 geographic situations gives students a chance to figure out which statistical technique should be used for a particular situation

Statistical Techniques in Geographical Analysis Gareth Shaw, Dennis Wheeler, 1994 The second edition of this widely used undergraduate textbook is shorter than its predecessor but now contains a thorough treatment of computational methods It aims to cover degree students needs in statistical methods from their first to final years Assuming no more than basic secondary or high school mathematics the authors provide coverage of a range of techniques from simple descriptive to parametric and non parametric methods in bivariate and multivariate settings Almost invariably each technique is introduced manually followed up by the appropriate application using either the SPSS or MINITAB software packages the two statistical packages most widely used by geographers Topics are introduced in an orderly sequence reinforced by worked examples so that the book can be equally valuable as part of a teaching scheme as an aid in distance learning or as an accessible reference source on the different techniques

Categorical Data Analysis for Geographers and Environmental Scientists Neil Wrigley, 1985

Multivariate Statistical Analysis for Geographers Daniel A. Griffith, Carl G. Amrhein, 1997 Explains how to implement interpret and conduct diagnostics on the results of multivariate techniques The book focuses on geo referenced data analysis applications with explicit diagnostics for the role played by spatial autocorrelation in multivariate analyses It also aims to establish specific connections between popular spatial analysis and multivariate procedures and outlines methodology for implementing spatial auto logistic and Poisson regressions
