International Journal of Radiation Biology ,2004 **Liposomes** Volkmar Weissig,2009-12-18 Efforts to describe and model the molecular structure of biological membranes go back to the beginning of the last century In 1917 Langmuir described membranes as a layer of lipids one molecule thick 1 Eight years later Gorter and Grendel concluded from their studies that the phospholipid molecules that formed the cell membrane were arranged in two layers to form a lipid bilayer 2 Danielli and Robertson proposed in 1935 a model in which the bilayer of lipids is sequestered between two monolayers of unfolded proteins 3 and the currently still accepted fluid mosaic model was proposed by Singer and Nicolson in 1972 4 Among those landmarks of biomembrane history a serendipitous observation made by Alex Bangham during the early 1960s deserves undoubtedly a special place His finding that exposure of dry phospholipids to an excess of water gives rise to lamellar structures 5 has opened versatile experimental access to studying the biophysics and biochemistry of biological phospholipid membranes Although during the following 4 decades biological membrane models have grown in complexity and functionality 6 liposomes are besides supported bilayers membrane nanodiscs and hybrid membranes still an indisputably important tool for membrane biophysicists and biochemists In vol II of this book the reader will find detailed methods for the use of liposomes in studying a variety of biochemical and biophysical membrane phenomena concomitant with chapters describing a great palette of state of the art analytical technologies
